Cisco *live!*

Show and Share - Providing Video On Demand To The Enterprise

BRKUCC-2678

Robert Morris

Consulting Systems Engineer – Collaboration

#clmel

Cisco *live!*

Agenda

- Enterprise Video Content overview
- Product updates
- Demo
- Streaming technologies discussion
- Deployment scenarios
- Cisco Live Case Study
- Q&A

Statistics...

2nd YouTube is the most used search engine after Google

4Bn Smart Devices Globally by 2017

\$4Bn Spend on VC by 2016

70% No. of SME's that would rather use VC than travel to meetings

79% Use two-way video at least weekly

76% Need to search videos for specific information

82% Record business video

100% Want to access & manage video from any internet device

Video Content Opportunity?

Enterprise Video Content – Capture Transform Share

Capture from Any Device

- Recorded/On-Demand
- Live Streaming

CAPTURE

Easy, Integrated, Pervasive

- Ingest any format
- Any-to-any adaptation
- Automated workflows

TRANSFORM

Output and Playback on Any Device

- Video On-Demand
- Live Streaming/Live Events
- Social tools such as commenting, rating, and tagging

SHARE

Organisational Communications Enabled by CXS

Cisco Video/TelePresence + Capture/Transform/Share technology enables direct, consistent, **high-quality** and **intelligent** communication, leveraging video endpoints, to reach the entire organisation.

Training & Knowledge

- Training events and demos
- Lecture capture
- Team updates
- Webcasts and seminars
- Podcasts/video blog

Internal Communication

- Town halls
- Live events
- Broadcast announcements
- Breaking news
- Team updates

Enhanced Business

- Business reviews
- Staff meetings
- Team updates
- Working sessions
- Planning meetings

Extend the Value and Reach of Video

Turn your video endpoints into HD Broadcast & Recording Studio's

Solutions Overview

Capture

TelePresence Content Server (TCS)

- TCS available as a VM
- Dedicated appliance on Cisco C220 UCS
- Can be preloaded on BE6000 and BE7000 (TCS 6.2)
- Integration with CUCM (TCS 6.2)
- Record and stream video and synchronised presentations
- Up to 10 ports of 1080p Recording / 2 ports of Streaming
- Cluster up to 10 TCS's (100 ports of Recording)
- Live and on-demand streaming
- Record scheduled (TMS) and ad hoc calls
- Premium resolution option (up to 1080p30)
- Secure Calling

New

Capture

Record and stream HD live video from H/323 / SIP Video-enabled endpoints

Share any Content

Share presentations, document camera, desktop synchronised with video

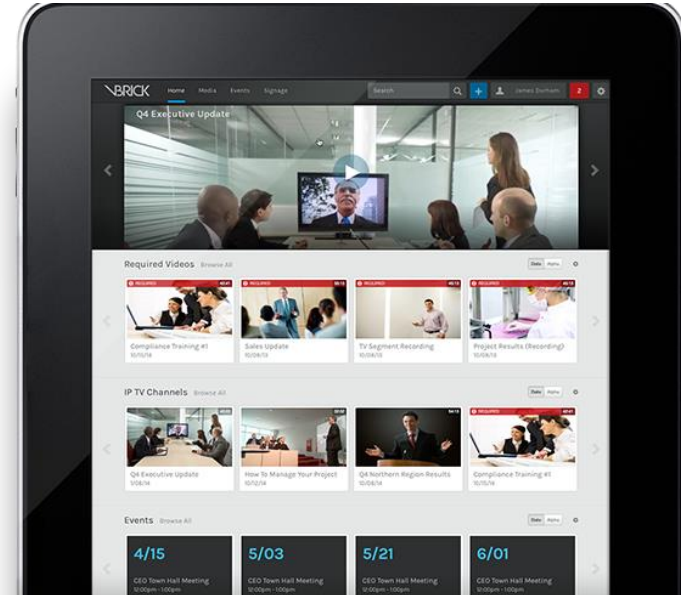

Distribution

Multiple live streaming formats
Open APIs

Introducing Rev

The Enterprise Video Portal

- Next Generation Enterprise Video Portal
- Video on Demand and Live Events
- Cloud/On Prem/Hybrid Deployments
- Mobile friendly HTML5/Responsive design
- Enterprise Security
- Available through Cisco Solutions Plus

Cisco *live!*

Cloud-Based vs. Cloud-Native

Cloud-Based

Single instance per client software simply installed on servers in a hosted environment.

No sharing of hardware resources.

Fewer insights into customer usage trends.

Client on-boarding more cumbersome.

Cloud-Native

Software can be distributed over many servers, in different locations, shared by clients.

Elastic so it can scale up or down depending the needs of end users.

Multi-tenant so hardware resources are shared.

New client **onboarding is fast** since there is no hardware to order and wait for.

Insights into each customer so that usage based pricing models are easily achievable.

Deployments

On-Prem, SaaS, and or Hybrid models supported

Multi-Tenancy

Multi-portal, branding, users, admins, sub-admins

Performance

Asynchronous Architecture, NoSQL, multi-instance

High Availability

No single point of failure, distributed & redundant

Next Gen UI

Bootstrap, HTML5, Responsive, Web 3.0

Administration

Streamlined, role-based permissions, simple to use

Device Control

Integrated control of capture and distribution devices

Open API

Integration, extensibility, workflows, and ability to grow

REV and Show and Share Comparison

	Rev	SNS
Architecture	Cloud/Hybrid/Virtual	Appliance
Mobile	Native/HTML5	iOS app only
Scale	Horizontal Scalability	<4000 concurrent
High Availability	Distributed	Active/Standby
Video Distribution	DME	ECDS
Licensing	User based	Author Based

Distributed Media Engine (DME) Overview

- Advanced Video streaming technology
 - BYOD/Mobile
- Solving the Enterprise Video Distribution Challenge
 - ‘I have dozens of TelePresence endpoints, but 1000’s of live streaming viewers’
- Flexible deployment options
 - Virtual and appliances available

(Video Format Conversion)

Cisco *live!*

Automated Workflow

Use Cases

Any Video Endpoint (H.323 or SIP)

- Corporate training, education
- Organisational communications
- Town hall live events
- Enhanced meetings

YouTube for the Enterprise

Content Distribution Network

AUTOMATED WORKFLOW: Easy / integrated / pervasive

TelePresence Content Server (TCS)

- Recording / streaming in the network
- Turns every TelePresence endpoint into a HD broadcast / streaming studio
- Full integration with TMS, CUCM

Rev Enterprise Video Portal

- Cloud Native Architecture
- Mobile support with HTML 5/Responsive Design
- Modern, consumer friendly UI
- Video-on-Demand and Live streaming Events
- Flexible Deployment options

Distributed Media Engine (DME)

- Advanced Streaming technology
- Distributed streaming architecture
- Scales Video distribution across the Enterprise

Demo

Cisco *live!*

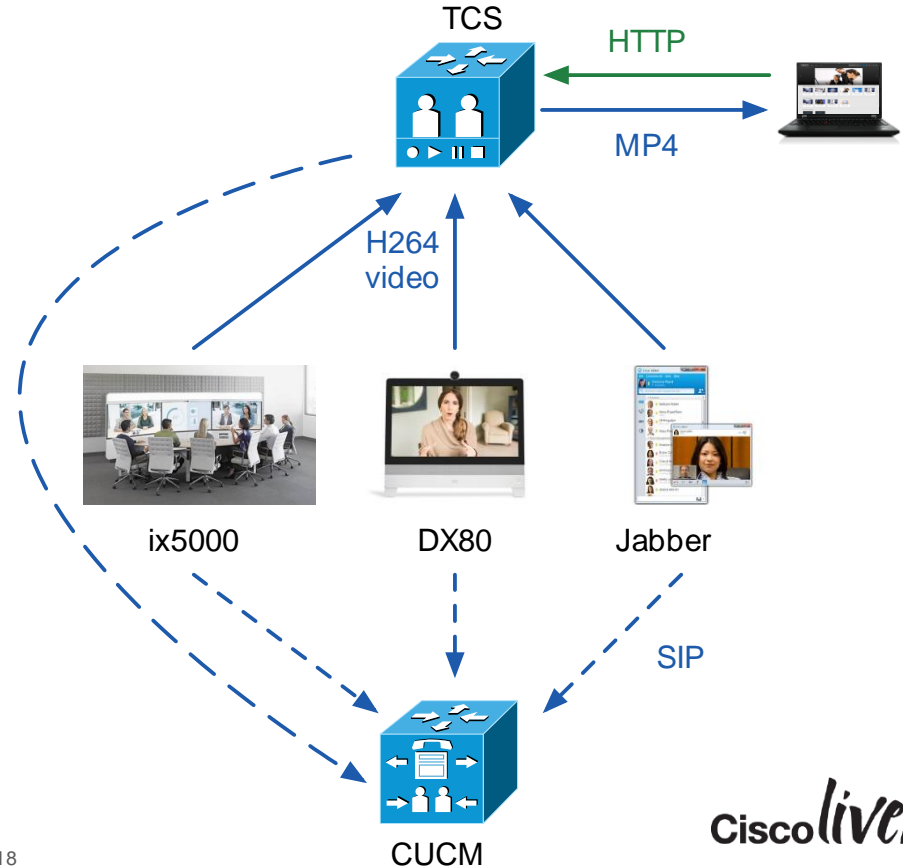

A nighttime photograph of a city street. In the foreground, there are long, curved light trails from cars, primarily in shades of yellow and orange. In the middle ground, a pedestrian bridge with blue lighting spans across the street. In the background, there are several tall buildings with lit windows and some flags on poles. The overall scene is illuminated by city lights.

TelePresence Content Server Design

TCS Deployment Discussion

All-in-one Video recording and playback

- TCS has SIP trunk to CUCM
- Video Codec calls TCS via SIP signalling
- TCS receives dual stream (main+presentation) H264 video, composites the streams into a single output
- PC user accesses TCS portal via HTTP
- User Views VoD via Flash player on TCS portal

TCS Only Limitations

One size does not fit all

- Uses built in Windows Media Streaming Server, or HTTP server
 - Limited to WMV for live streaming (uses Silverlight player on PC and Mac)
 - MP4 VoD's are streamed via HTTP progressive download (can't skip ahead until downloaded)
- Single box design limits scalability for viewing
 - 100 concurrent viewers maximum per TCS in cluster
 - Does not effect 10 concurrent recordings per TCS in cluster
- Uses TCS as the user portal, not SNS, certain features not available
 - Only content from TCS recordings is available, no other sources

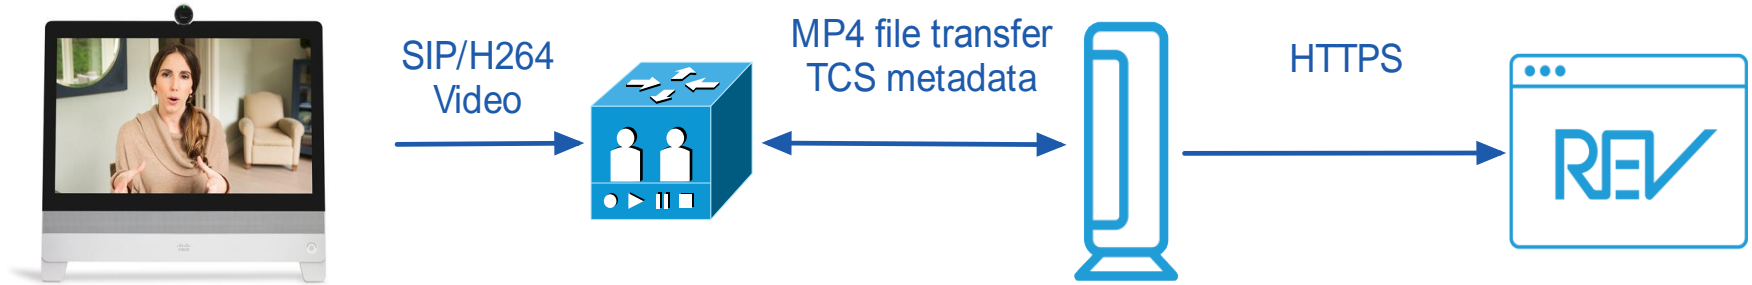

TCS Clustering

- Cluster up to 10 TelePresence Content Servers:
- Manage a single pool of resources with up to 100 recording ports (with options)
- CUCM load balances incoming calls across multiple SIP trunks via Route Group
- Cluster wizard makes adding and removing nodes easy
- Use common network load balancers for HTTP front end

REV/TCS Integration

- TCS can publish to external streaming server (DME)
- DME has built in interface to Rev
- Allows seamless publishing from TCS to Rev

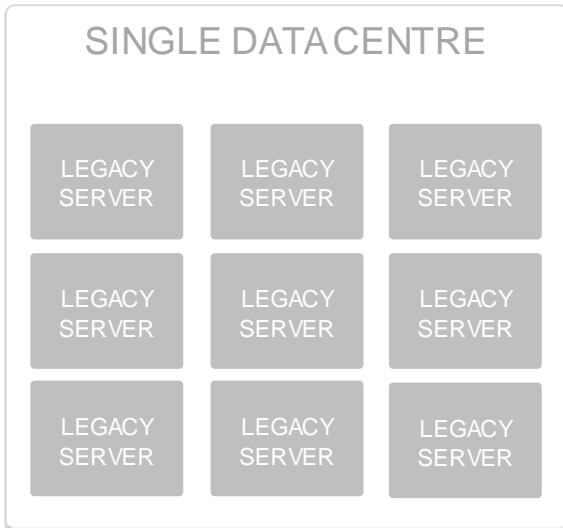

A nighttime photograph of a city street. In the background, there are modern buildings with lit windows and a pedestrian bridge with blue lighting. The middle ground shows a road with traffic lights and some vehicles. The foreground is dominated by long, colorful light trails from moving vehicles, creating a sense of motion and energy. The overall scene is vibrant and urban.

Rev Architecture and Design

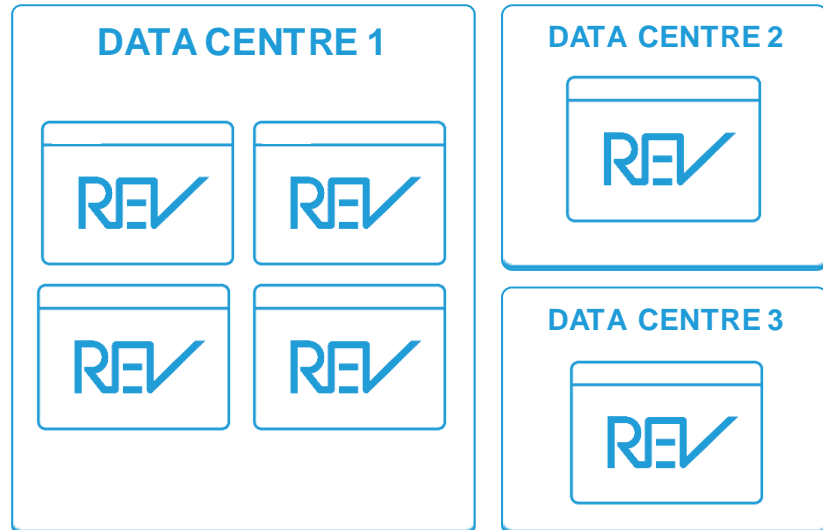

Deployment Flexibility

Rev is built from the ground up to be deployed across large enterprises that require efficient use of hardware resources.

LEGACY DEPLOYMENT MODEL ALL SERVERS IN ONE LOCATION

CLOUD NATIVE DEPLOYMENT MODEL DISTRIBUTE SERVERS

Distributed Instances

NODE 1

Node 2 gains instant redistribution when added to the cluster

Rev distribution logic performs its best effort to distribute load equally

With each new node, Rev dynamically senses and prepares to distribute data across the cluster

Distributed Instances - Failover

If a node fails, the system will dynamically reallocate resources among the remaining active nodes

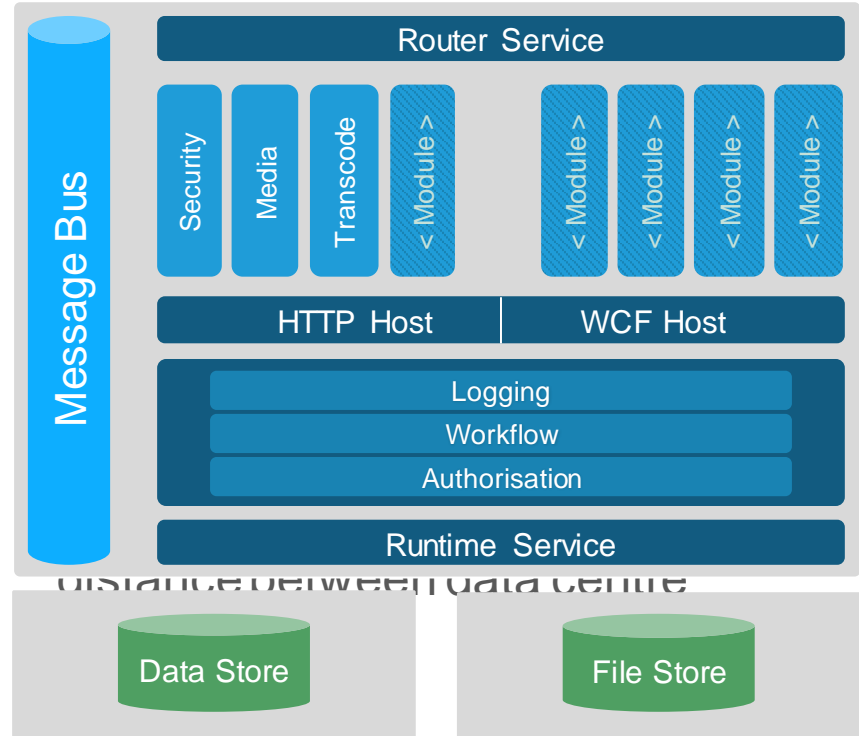

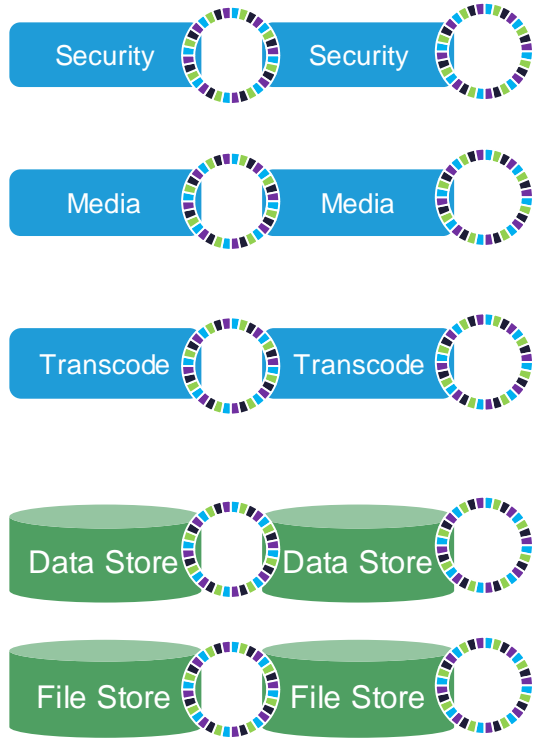

NODE 1

NODE 2

~~NODE 3~~

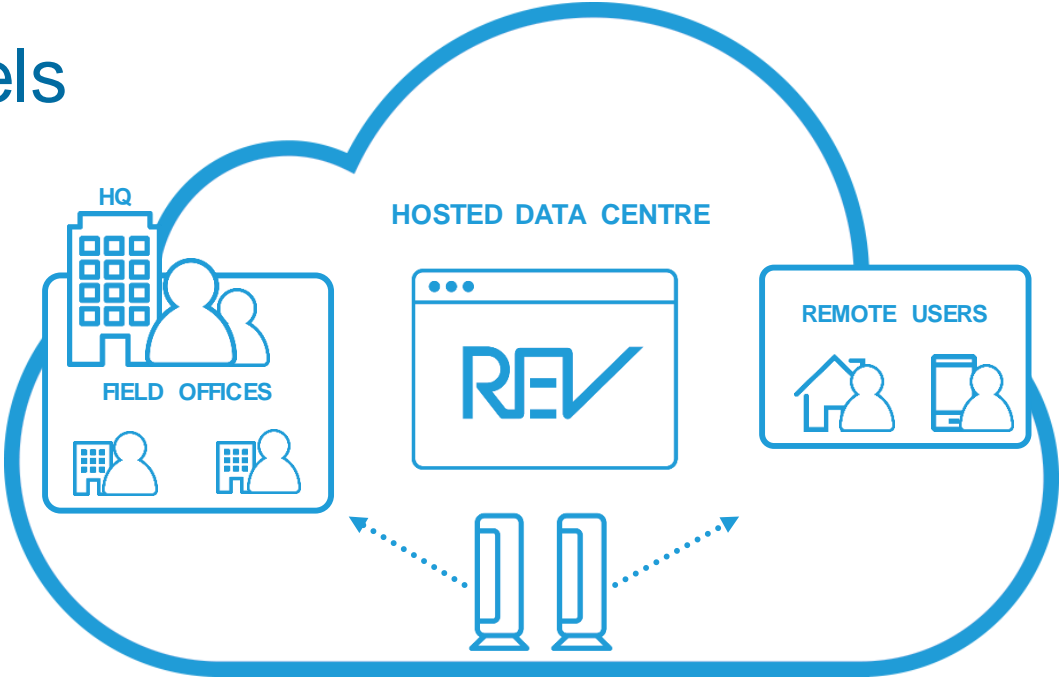

NODE 4

Distributed Instances

HYBRID

A nighttime photograph of a city street. In the background, there are several tall buildings with lit windows and balconies. A pedestrian bridge with a glass railing spans across the street. In the foreground, there are long, curved light trails from cars, primarily in shades of yellow and orange, indicating motion. The overall scene is illuminated by city lights and streetlights.

Streaming Technologies and DME Design

DME Streaming Functions

Advanced Streaming and ECDN functionality

- Streaming Technology
 - Format/Device support
 - Transrating
 - Multicast support
- Enterprise Content Distribution
 - Caching
 - Distributed Streaming

Streaming Technology Overview

Protocols for delivering streaming video

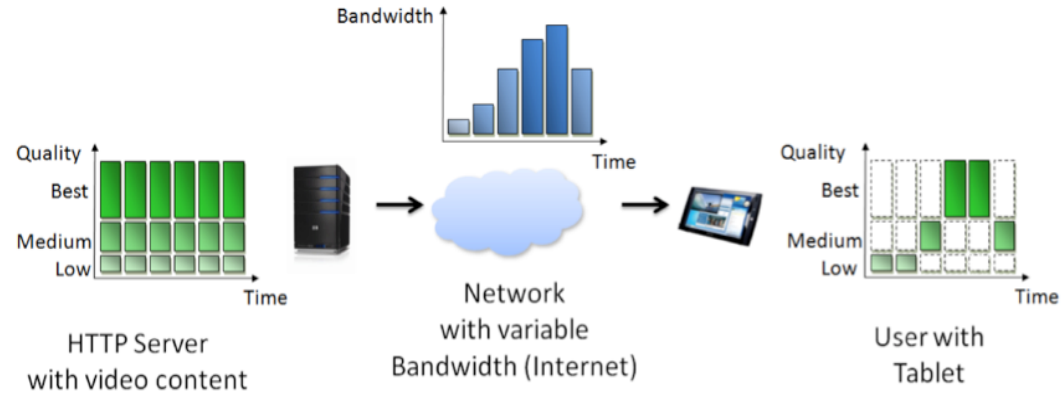

- HTTP
 - Single, large file delivered
 - Maximum compatibility
 - Not really streaming, can't skip ahead
- RTMP
 - Adobe Flash standard
 - Protocol sends segments of original video
 - Streaming, skip ahead
- HLS (HTTP Live Streaming)
 - Apple Standard, used by Mobile Devices
 - File is 'pre-chunked' into many smaller files
 - Manifest file is an index of the smaller files
 - Chunks are delivered via HTTP

Adaptive Bitrate Discussion

One video, multiple quality levels

- Every File is created at multiple quality/bitrate levels
- Player detects bandwidth and requests appropriate quality/bitrate
- Quality of playback can go up/down over time based on network conditions
- **Especially important for mobile devices/networks**

Multicast Considerations

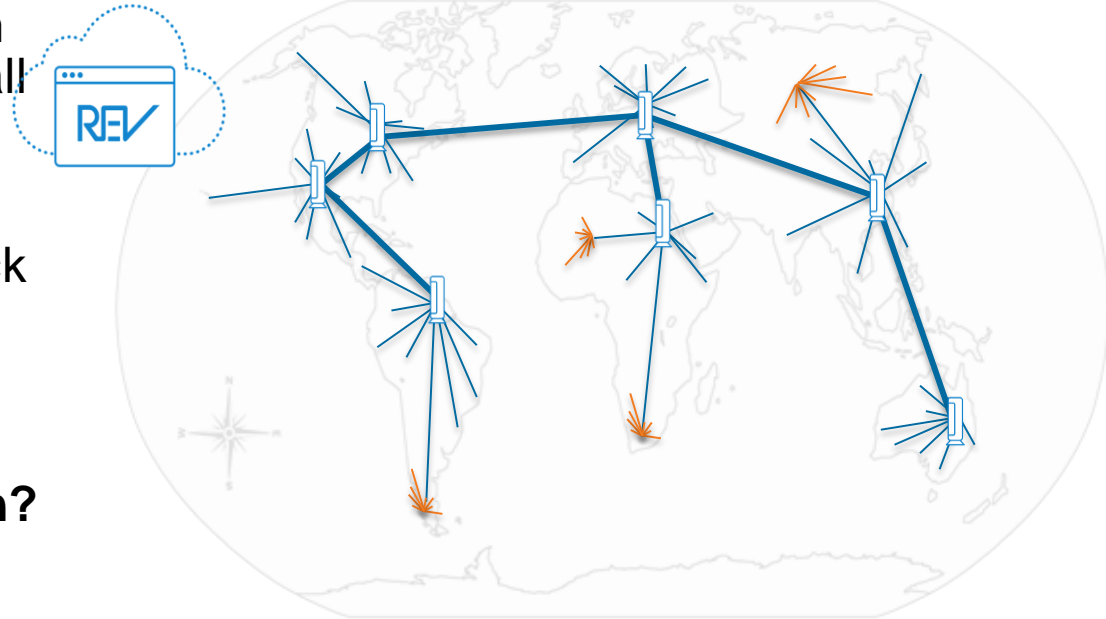

When and where to use it

- No Mobile (iOS/Android/etc) Support
- Does not help with VoD delivery
- Protocol Support
 - Windows Media: Legacy, no longer in development
 - Flash: RTMFP, Proprietary server required
 - RTP/TS: broadcast standard
- Player Support
 - Windows Media Player: Only windows desktops, legacy
 - Flash Player: commonly deployed
 - Vbrick player: supports RTP/TS multicast,
 - requires player installation (Win/Mac OS)

DME Distribution Functions

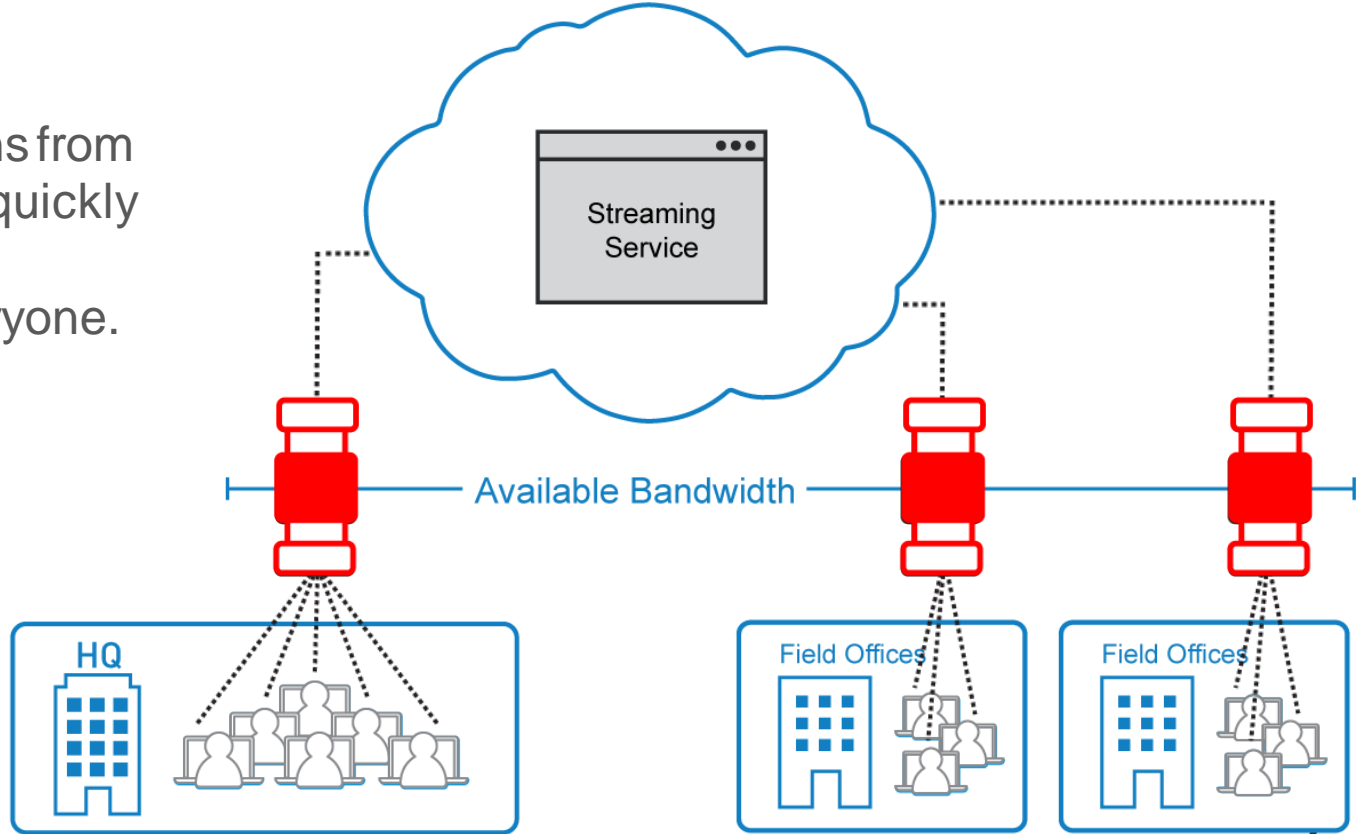

Enterprise Content Distribution (ECDN)

- DME can take single live stream across the WAN and deliver to all 50 users on the LAN
- DME can preposition and cache VoD content locally and playback on LAN
- Consider a remote site with 50 users watching a 1Mbps live stream – **how much bandwidth?**

Distribution Challenge: Cloud

Unicast connections from the public internet quickly clog the network connection for everyone.

Cisco *live!*

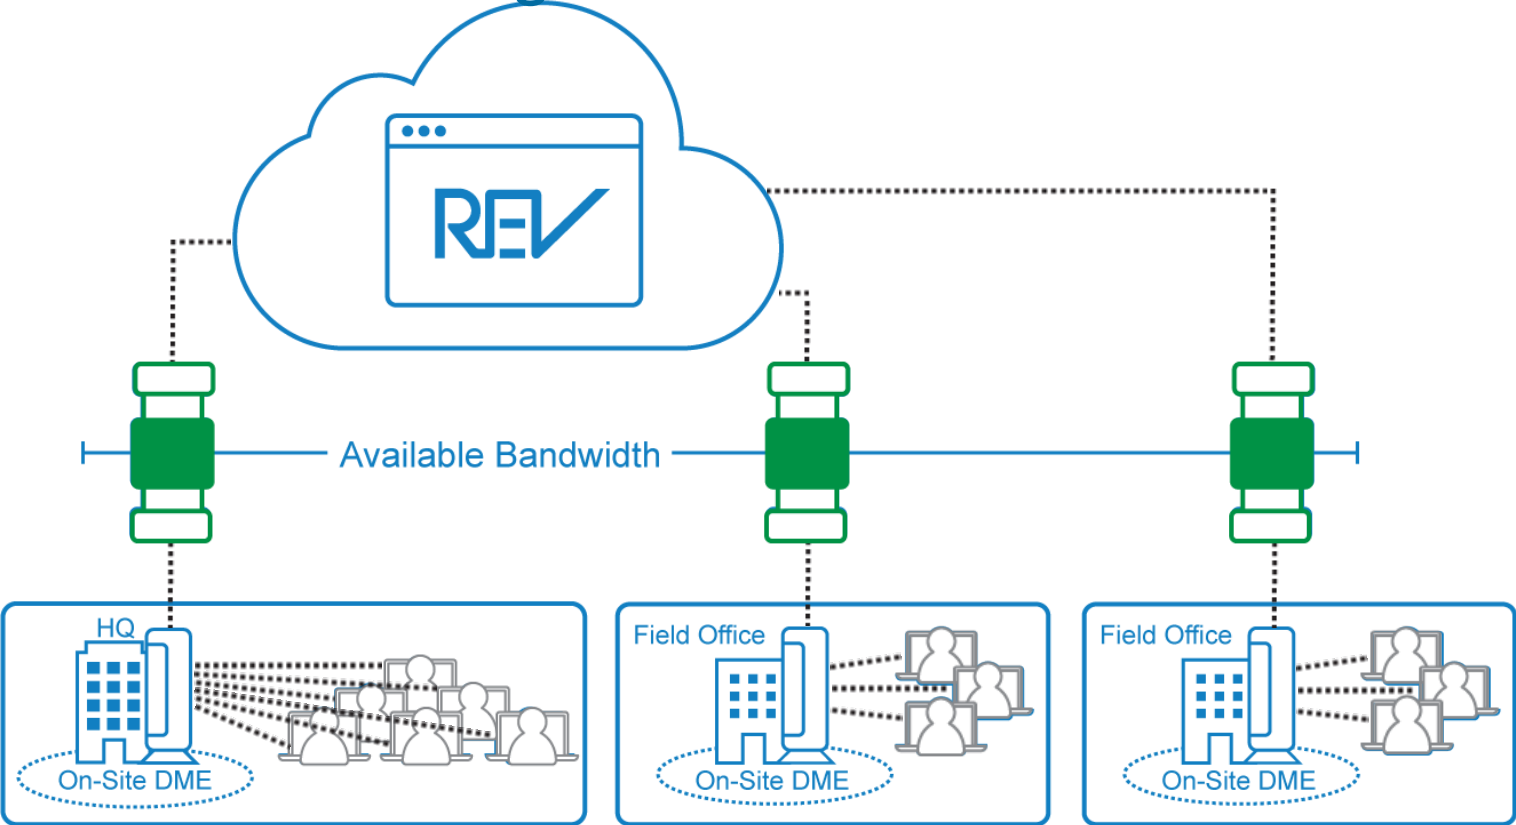

Distribution Challenge: On Prem

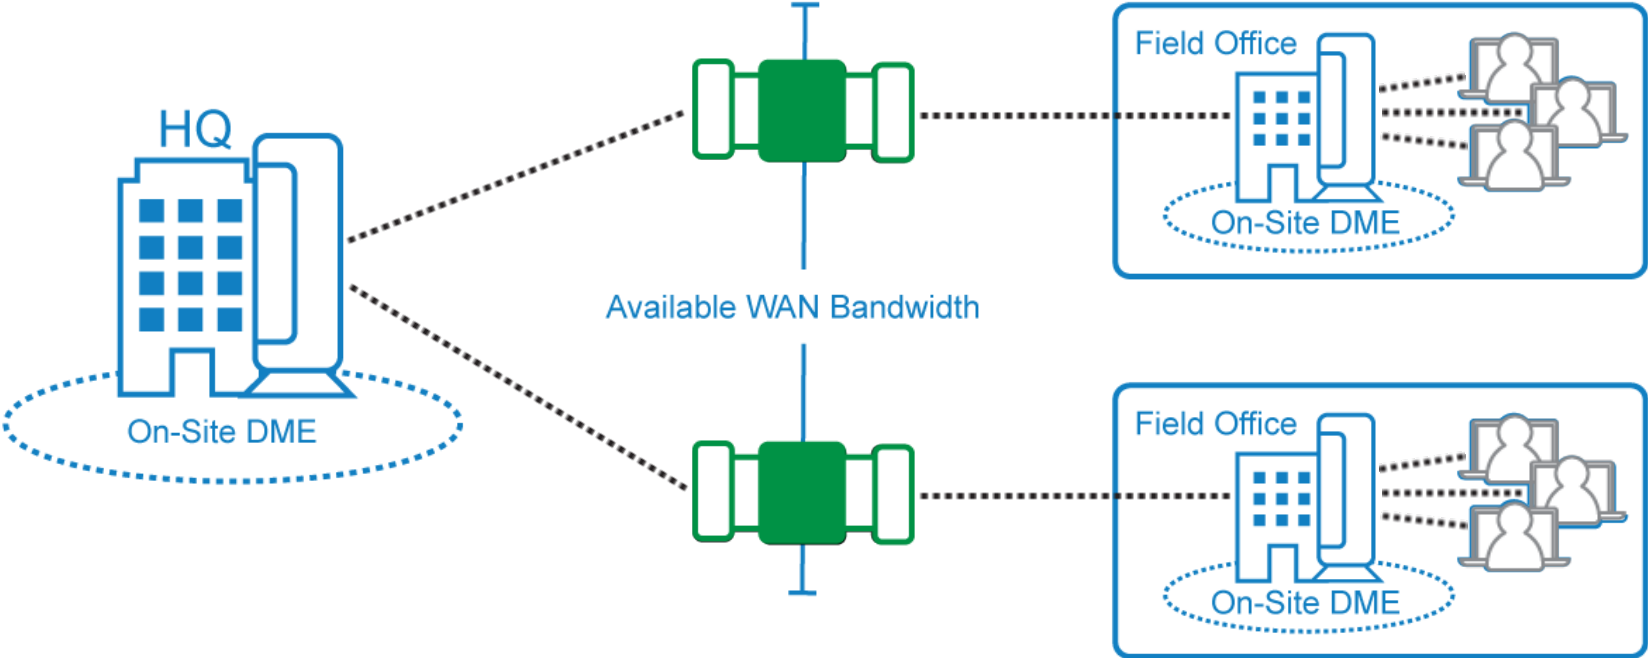

Centralising content at a single site quickly results in too many connections over the corporate network

Cisco *live!*

Distribution Challenge Solved: Cloud

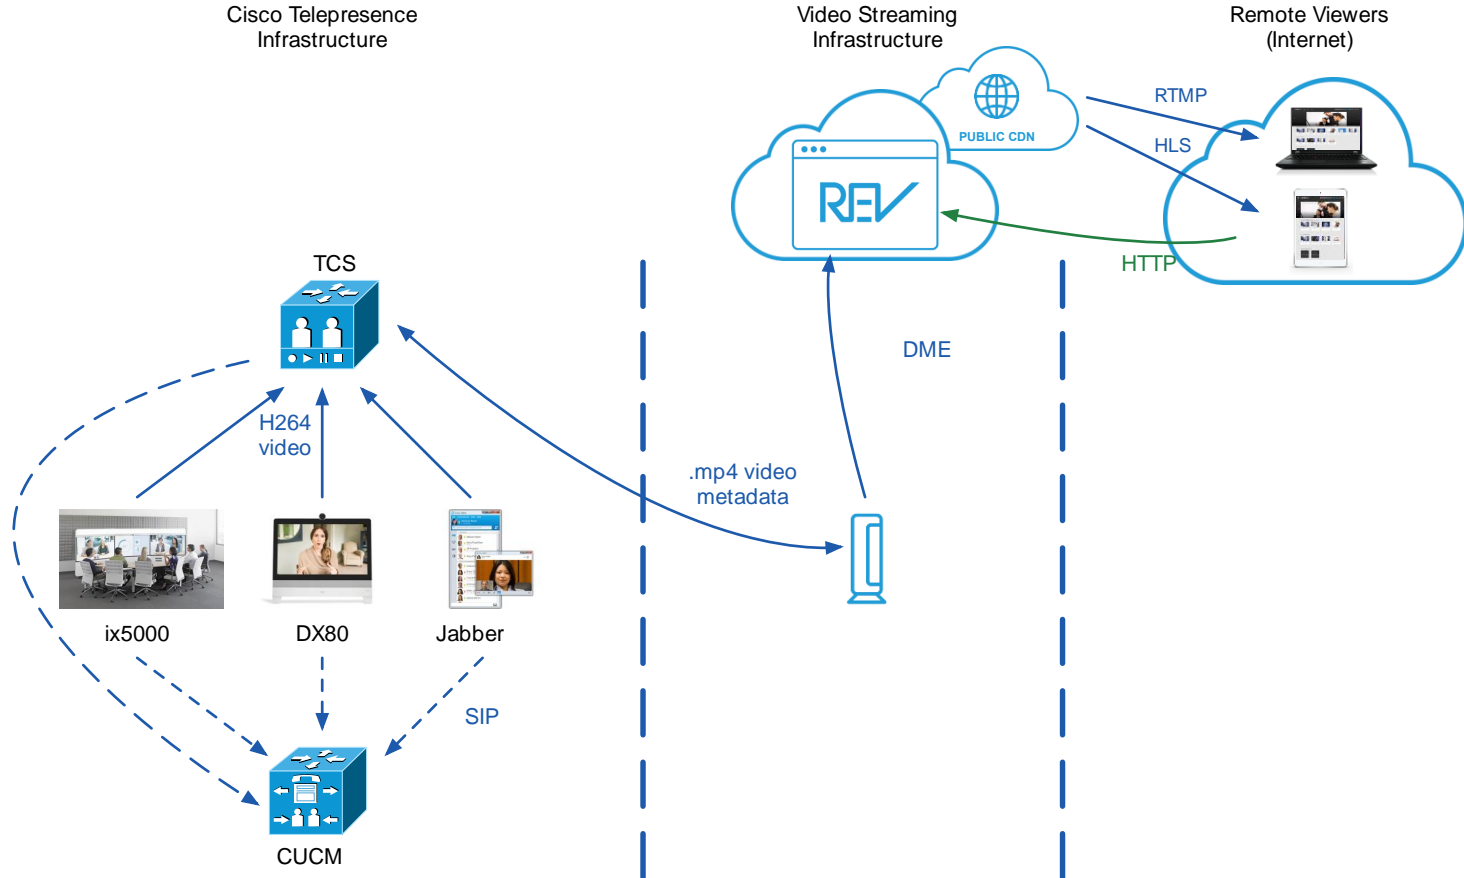

Distribution Challenge Solved: On Prem

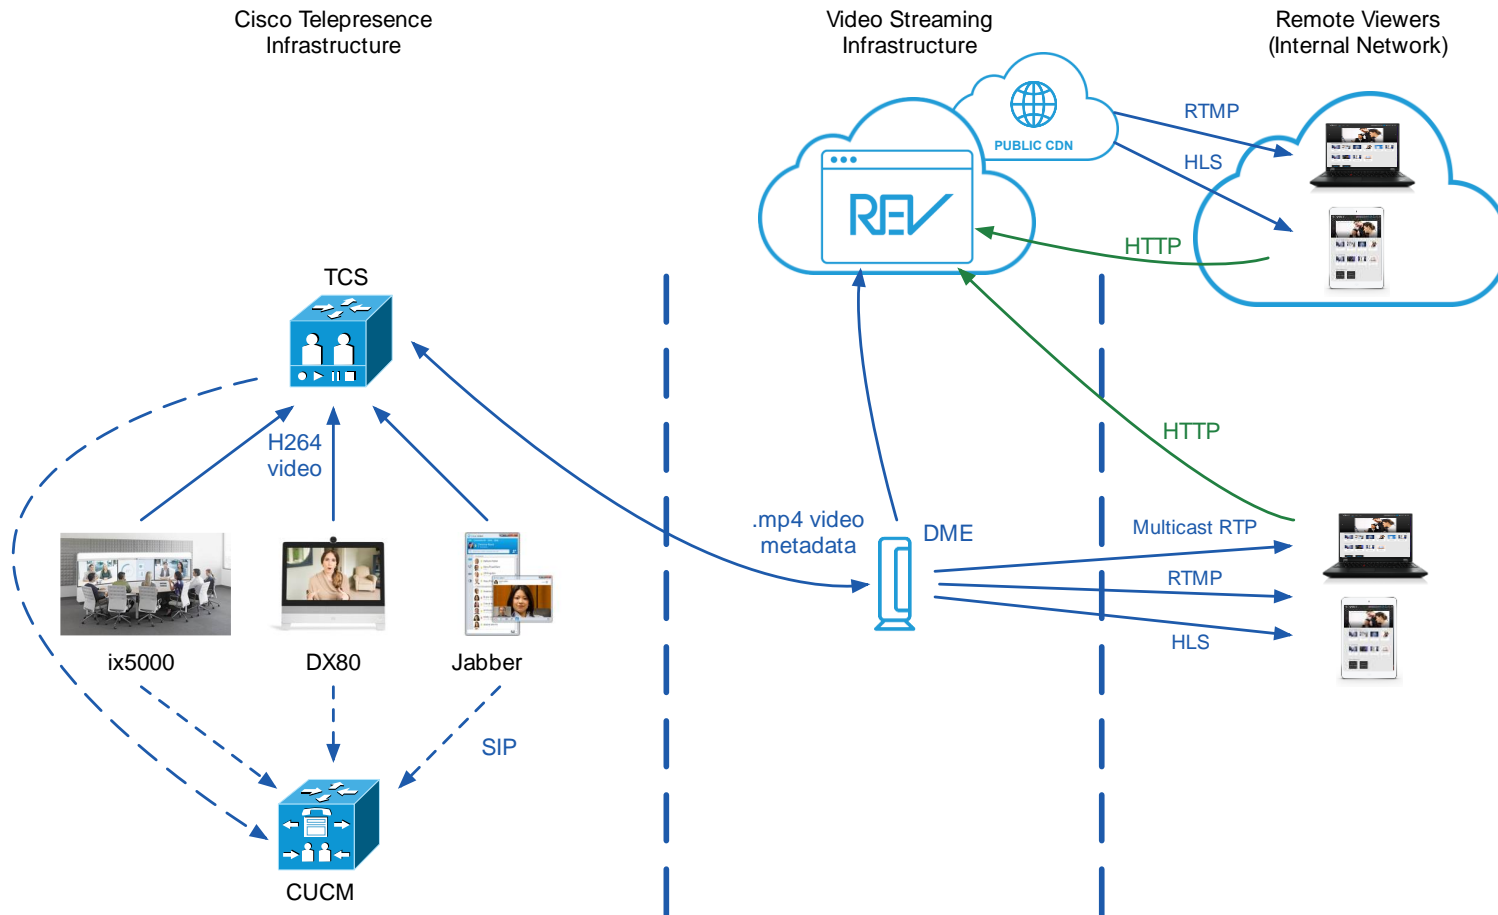

A nighttime city street scene with a pedestrian bridge in the background. The foreground is dominated by long-exposure light trails from cars, creating a sense of motion and energy. The background shows modern buildings and streetlights.

Enterprise Video Content Design

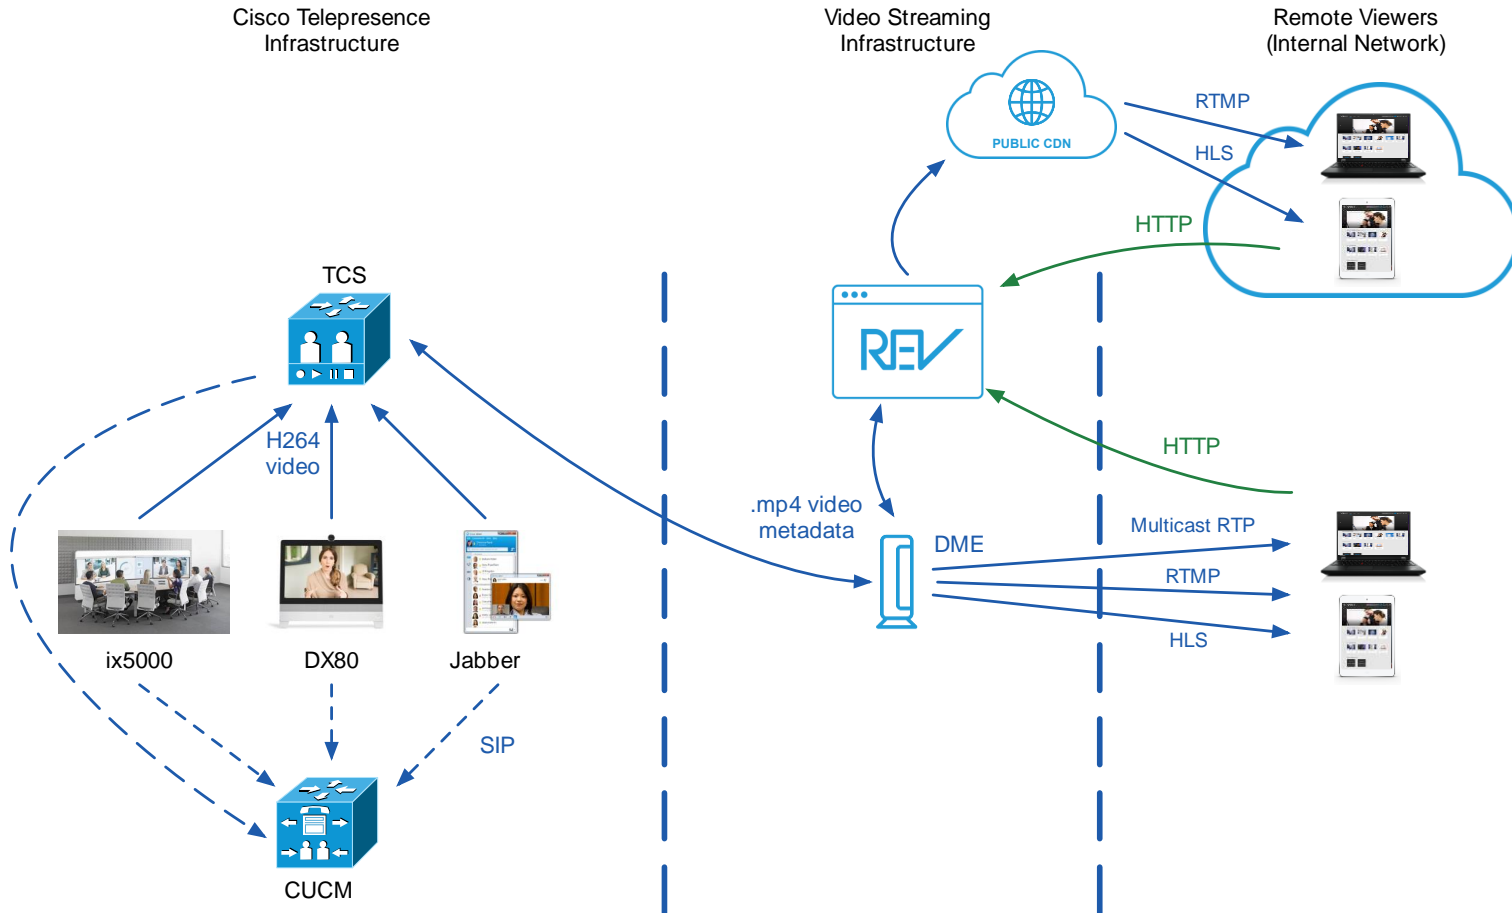

Cloud Only Deployment

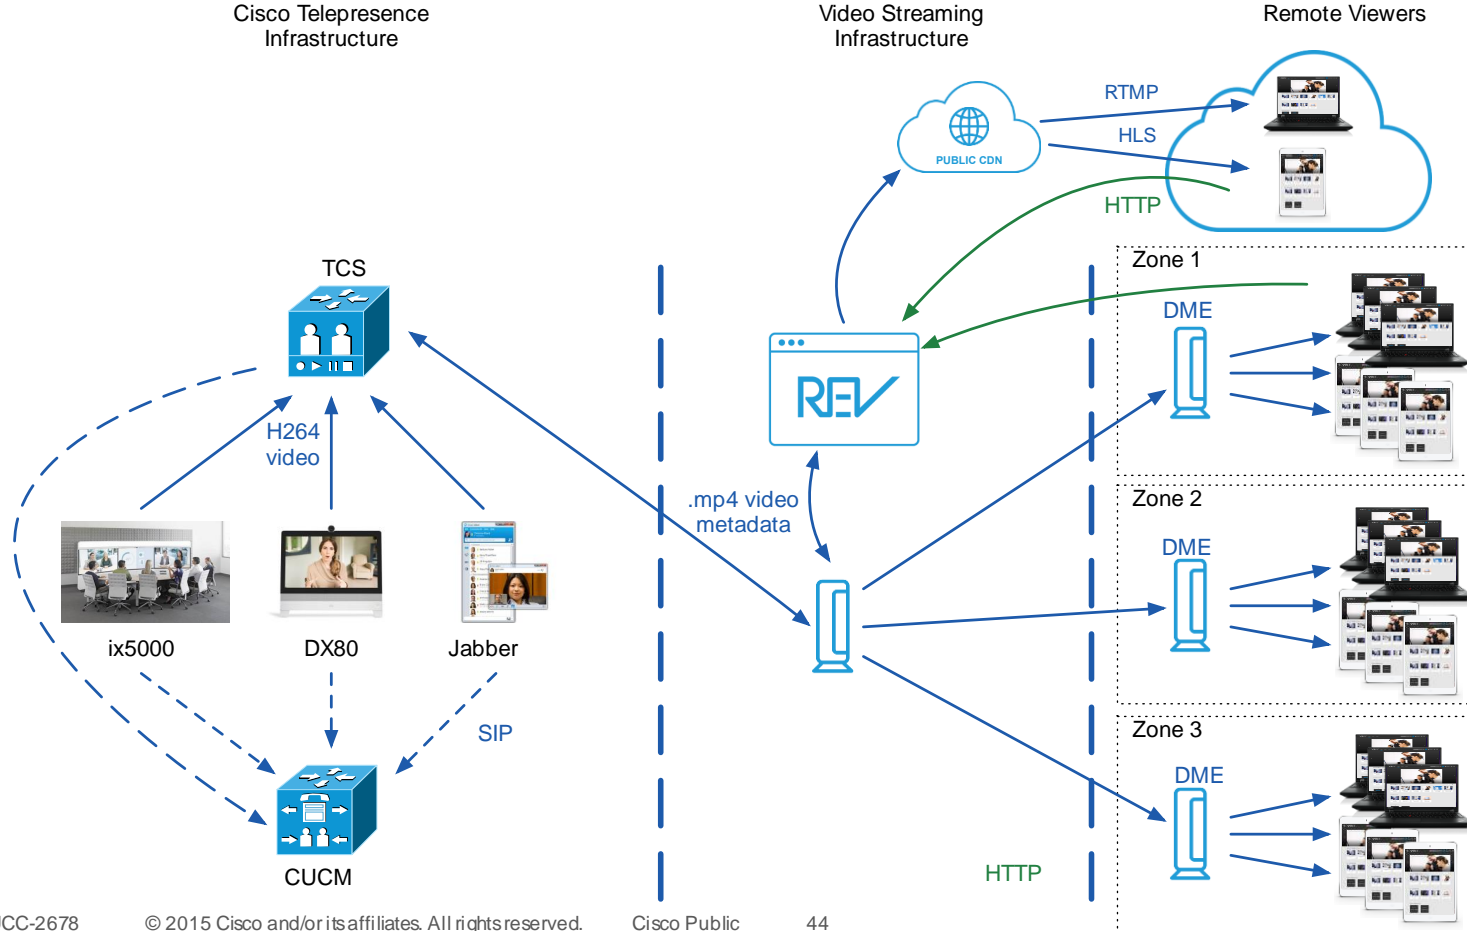

Cloud-Hybrid Deployment

On Premise Deployment

Multisite/Distributed Deployment

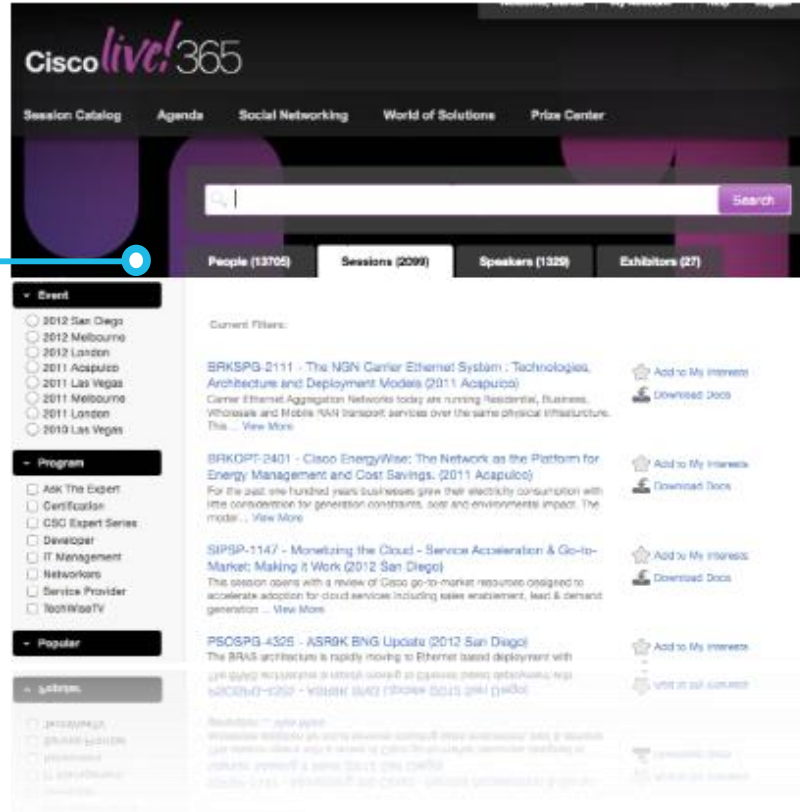

A long-exposure photograph of a city street at night. The foreground is dominated by vibrant, multi-colored light trails from moving vehicles, creating a sense of motion and energy. In the background, a modern pedestrian bridge with blue lighting spans across the street. Tall buildings with illuminated windows and storefronts line the street, and traffic lights are visible in the distance. The overall scene is a dynamic urban environment.

Cisco Live! Case Study

You Already Know This Solution!

TCS in use at Cisco Live!

Every Session from Cisco Live! the last 3 years running was captured using Capture-Transform-Share

The screenshot shows the Cisco Live! 365 website interface. At the top, there's a navigation bar with links for Session Catalog, Agenda, Social Networking, World of Solutions, and Prize Center. Below this is a search bar and a filter bar with tabs for People (13705), Sessions (209), Speakers (1529), and Exhibitors (27). The main content area displays a list of sessions with details like session ID, title, location, and description. On the left side, there are filter sections for Event (listing years and locations), Program (listing various roles and topics), and Popular. A blue circle highlights the 'Sessions' tab in the filter bar.

Capture

- 36 breakout rooms were outfitted with a C90 Codec, connected to:
 - Cisco onsite network, private VLAN
 - Speaker PPT feed from laptop (VGA)
 - Cisco camera (HDSDI & control)
- Scheduling
 - All sessions were entered into the TMS scheduling system, and set with 2 participants: room codec & TCS recording port.
- Monitoring
 - The content editors monitor the feeds from the rooms, and move the camera if the speaker wanders off.
 - If they see an issue, the codec team is contacted via radio and immediately responds.

Results

- Over 250 session recordings (400+ hours of on-demand video content)
- 3 trained content editors (no previous TelePresence experience)
- Total Cisco on Cisco deployment: UCS, VXi, TMS, CUCM, TCS
- On-demand content made available to attendees within 3 business days, inside CiscoLive365.com
- 25% more sessions captured, **with video**, at 30% of the cost of the previous year with outsourced provider.

Conclusion

Key Take-Aways

- High impact use cases for video
 - Corporate Training
 - Town Halls
 - Executive / CEO broadcasts
 - Recording / Streaming meetings
 - Enterprise Video Sharing Portal
 - Corporate Communications
- Little to no training required
- Integrates seamlessly with Cisco TelePresence Solutions
- Extends the value of existing Cisco Unified Communications
- Leverage Cisco Video Content to have a dramatic impact on your corporate communications and collaboration.

Q & A

Cisco *live!*

Complete Your Online Session Evaluation

Give us your feedback and receive a Cisco Live 2015 T-Shirt!

Complete your Overall Event Survey and 5 Session Evaluations.

- Directly from your mobile device on the Cisco Live Mobile App
- By visiting the Cisco Live Mobile Site
<http://showcase.genie-connect.com/clmelbourne2015>
- Visit any Cisco Live Internet Station located throughout the venue

T-Shirts can be collected in the World of Solutions on Friday 20 March 12:00pm - 2:00pm

Learn online with Cisco Live!

Visit us online after the conference for full access to session videos and presentations. www.CiscoLiveAPAC.com

Cisco *live!*

Thank you.
