

What You Make Possible

Automating UCS for System Administrators

BRKCOM-1004

Session Agenda

- System Overview
- Management Information Model
- Documentation and Tools
- API Methods, Responses and Filters
- Working Example

System Overview

Unified Computing System

UCS Physical Components

- Servers – blade and rack mount
- Server BIOS and firmware
- Disk and disk controllers
- Interface cards (Adapters)
- Integrated Management Controllers (CIMC)
- IO Modules and Fabric Extenders
- Fabric Interconnects
- Ports
- PSU
- Fans
- Blade Chassis
- SEEPROM
- Software Images
- Expansion Modules
- UCS Manager

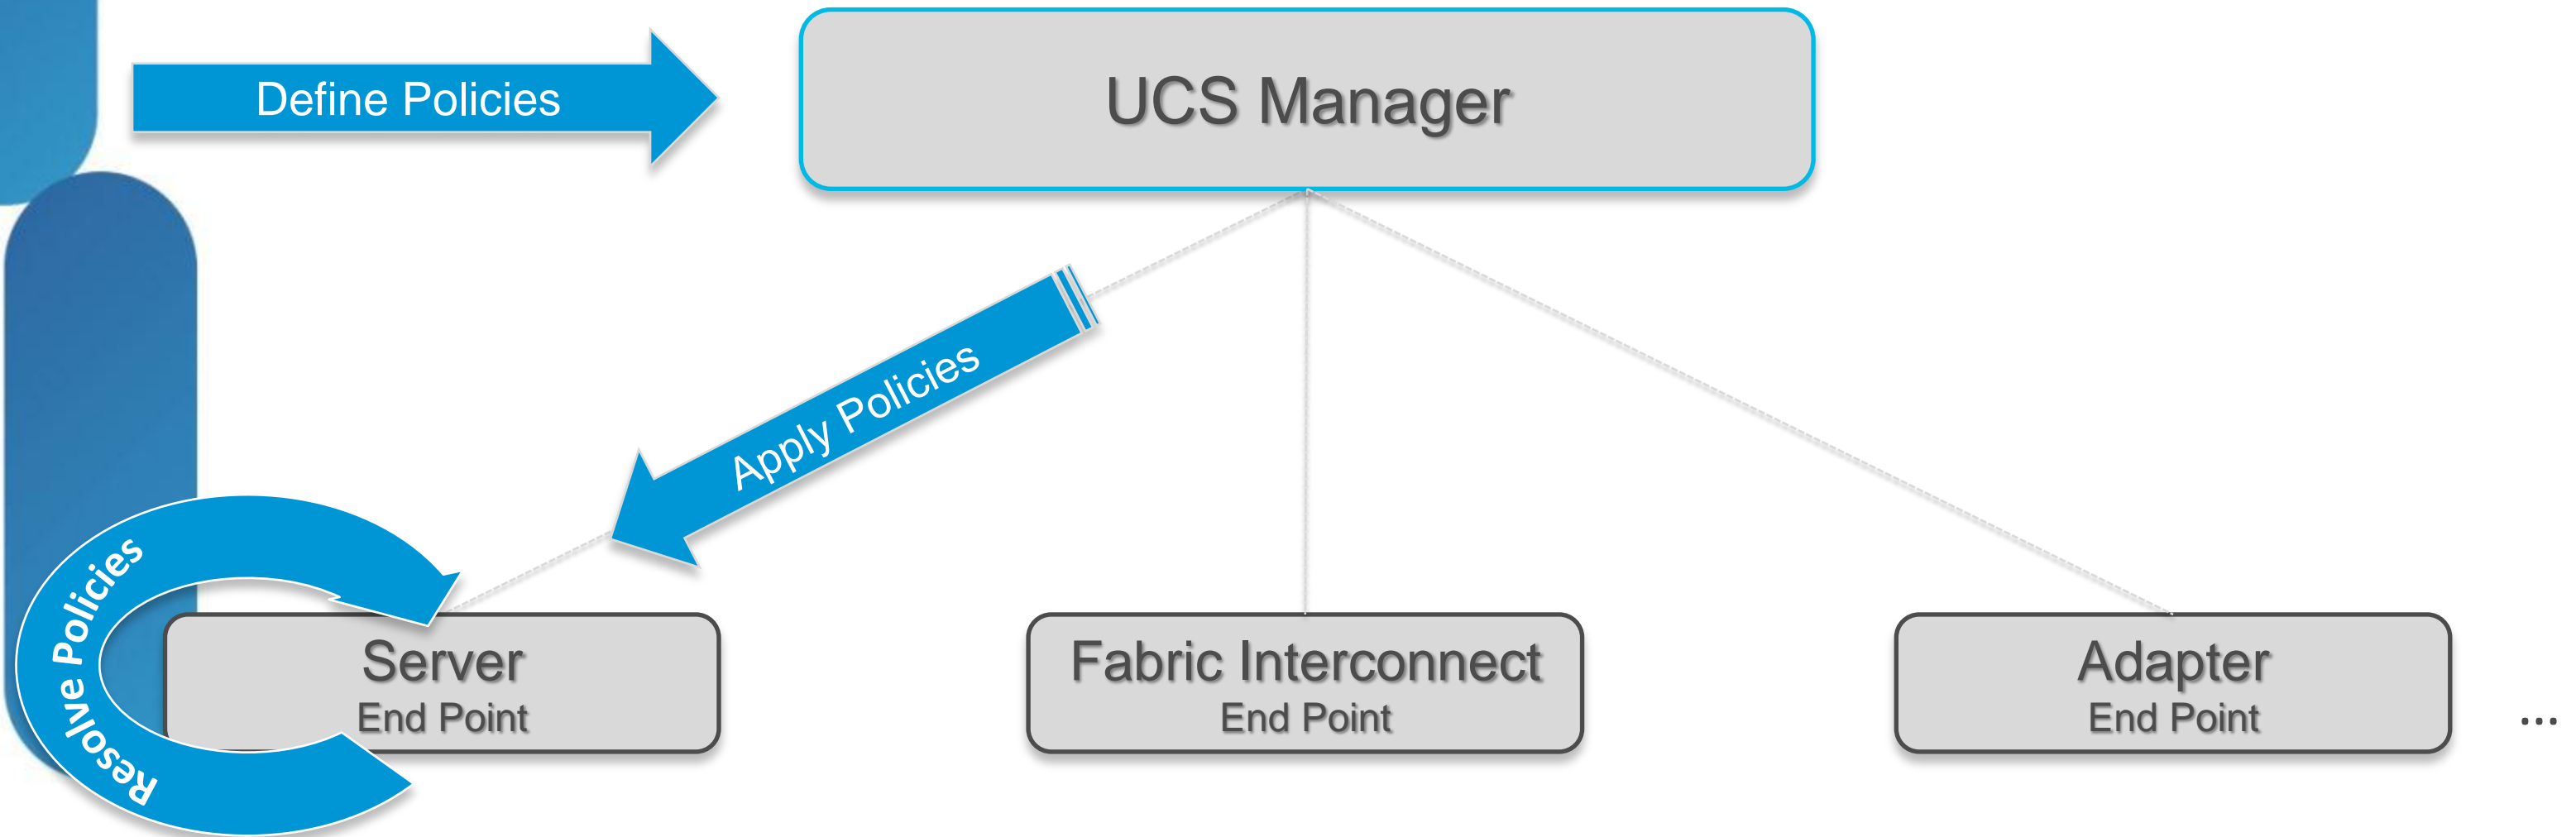

Unified Computing System

UCS Logical Components

- Service Profiles
- Policies
- VMs
- VLANs
- VSANs
- Templates
- Pools
- Port profiles
- Licenses
- Events
- Orgs
- Admin Configuration
- Files
- Port Channels

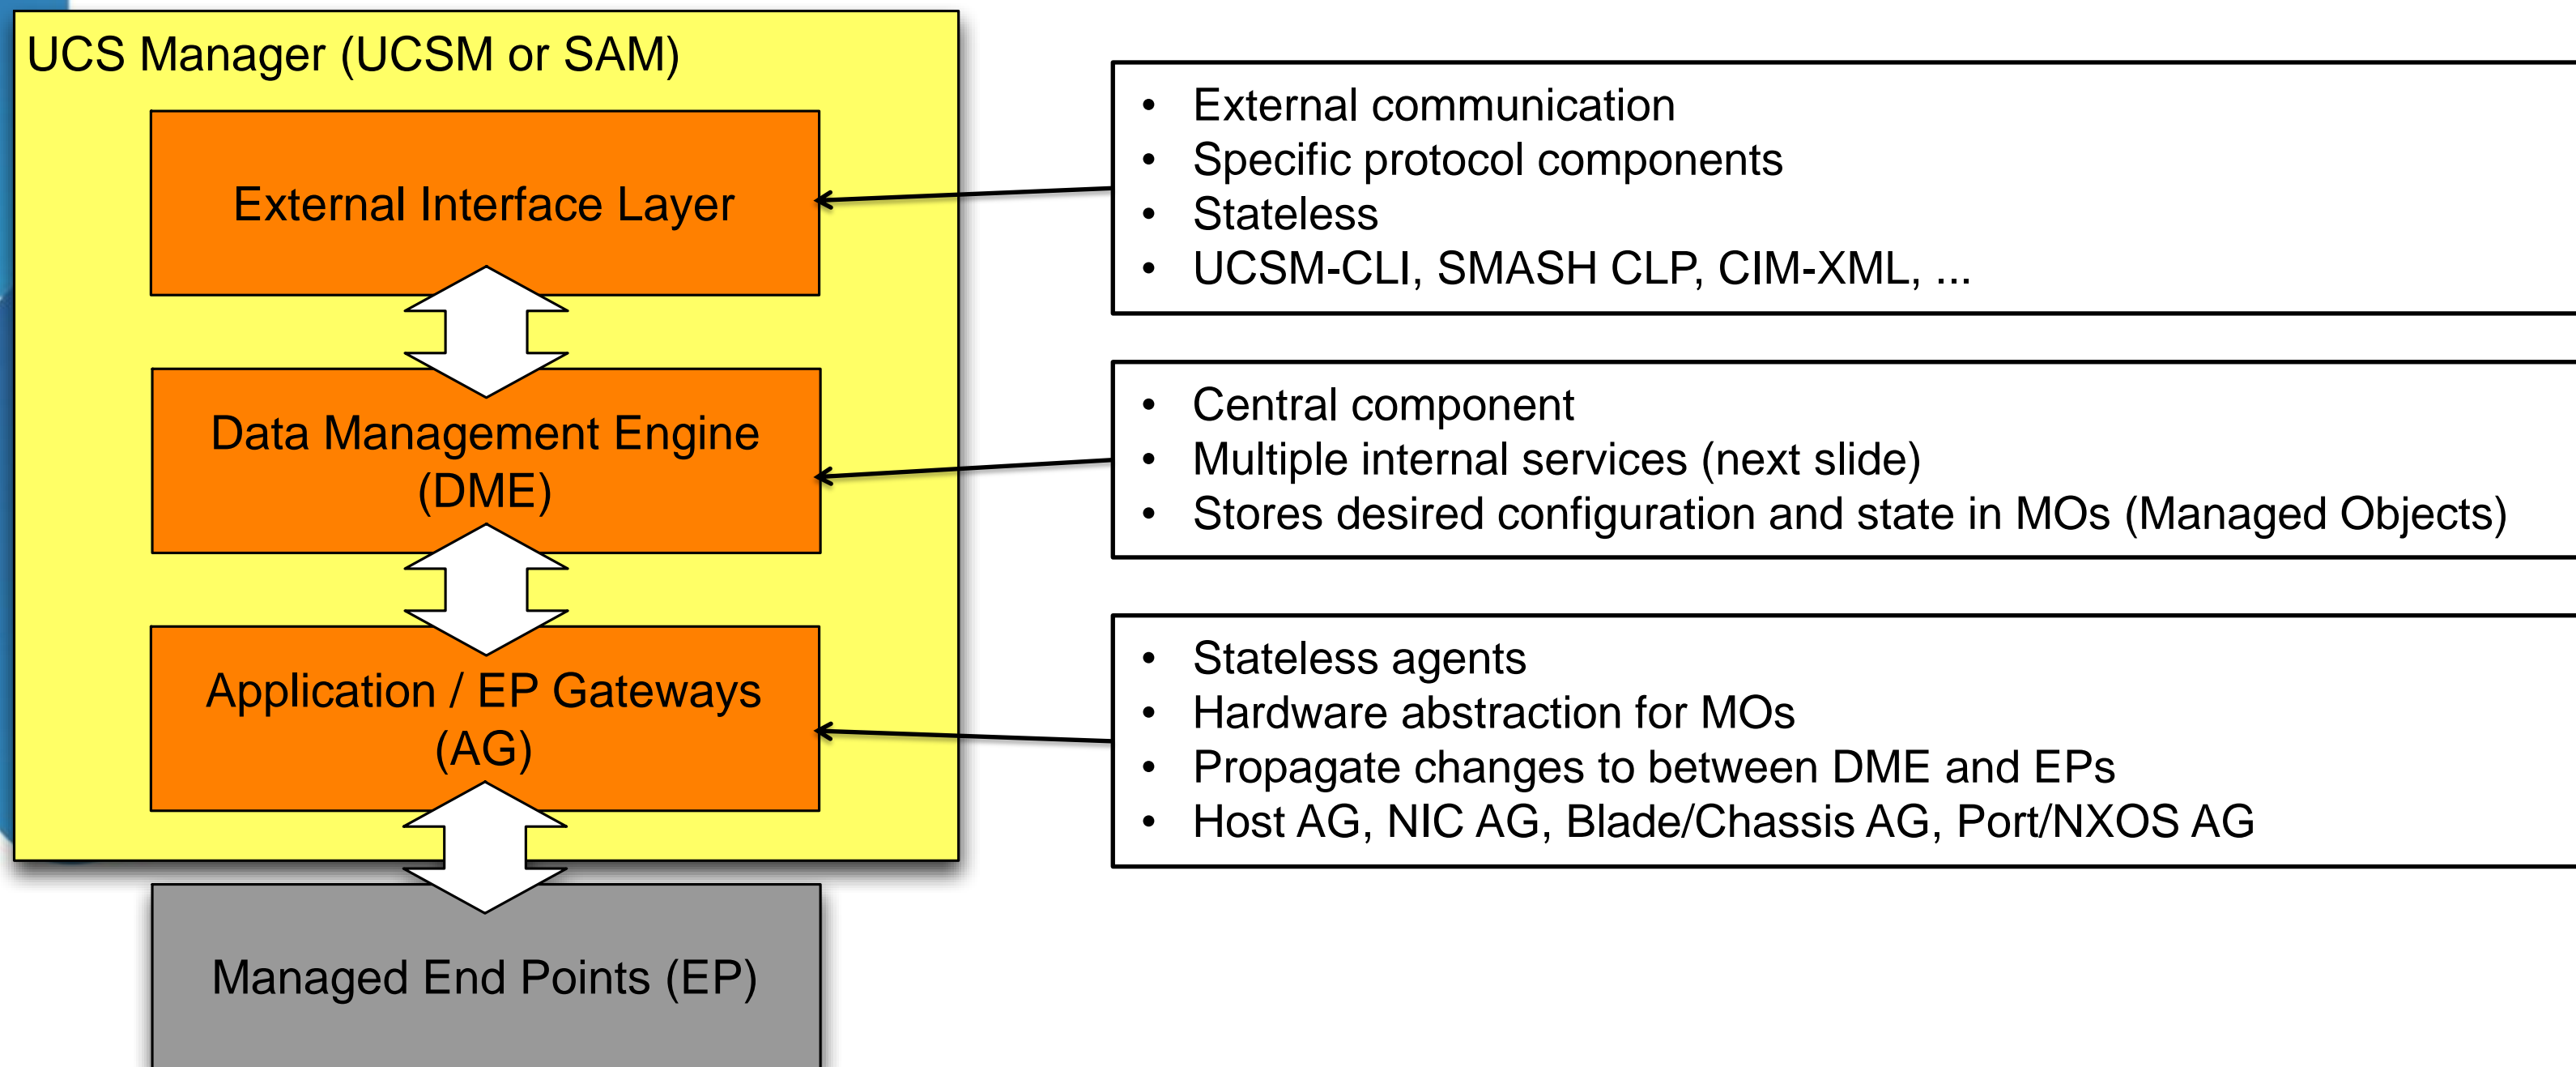

UCS Manager

Policy Based Management

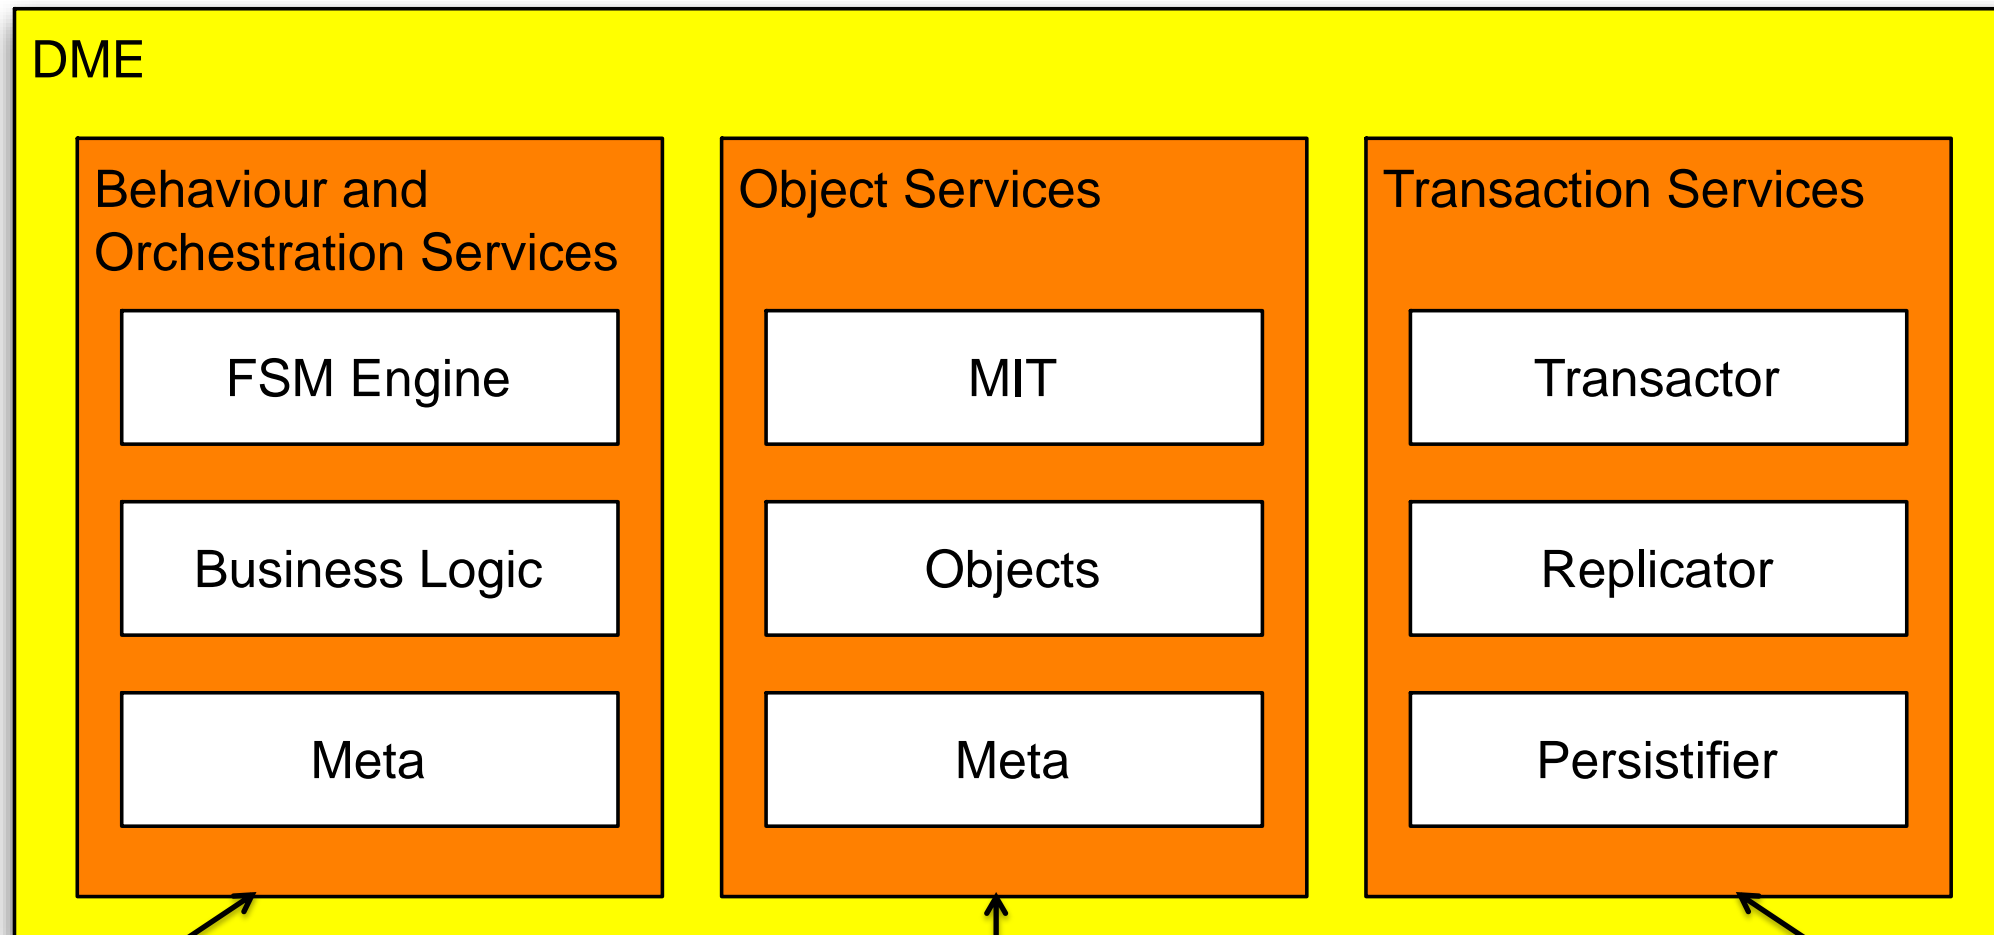

- UCS Manager is the policy manager
- End points resolve the policies defined in UCS Manager

UCSM Overall Architecture

Note: you will often see documentation and objects refer to "SAM"
SAM (Server Array Manager) = UCSM

DME Layer

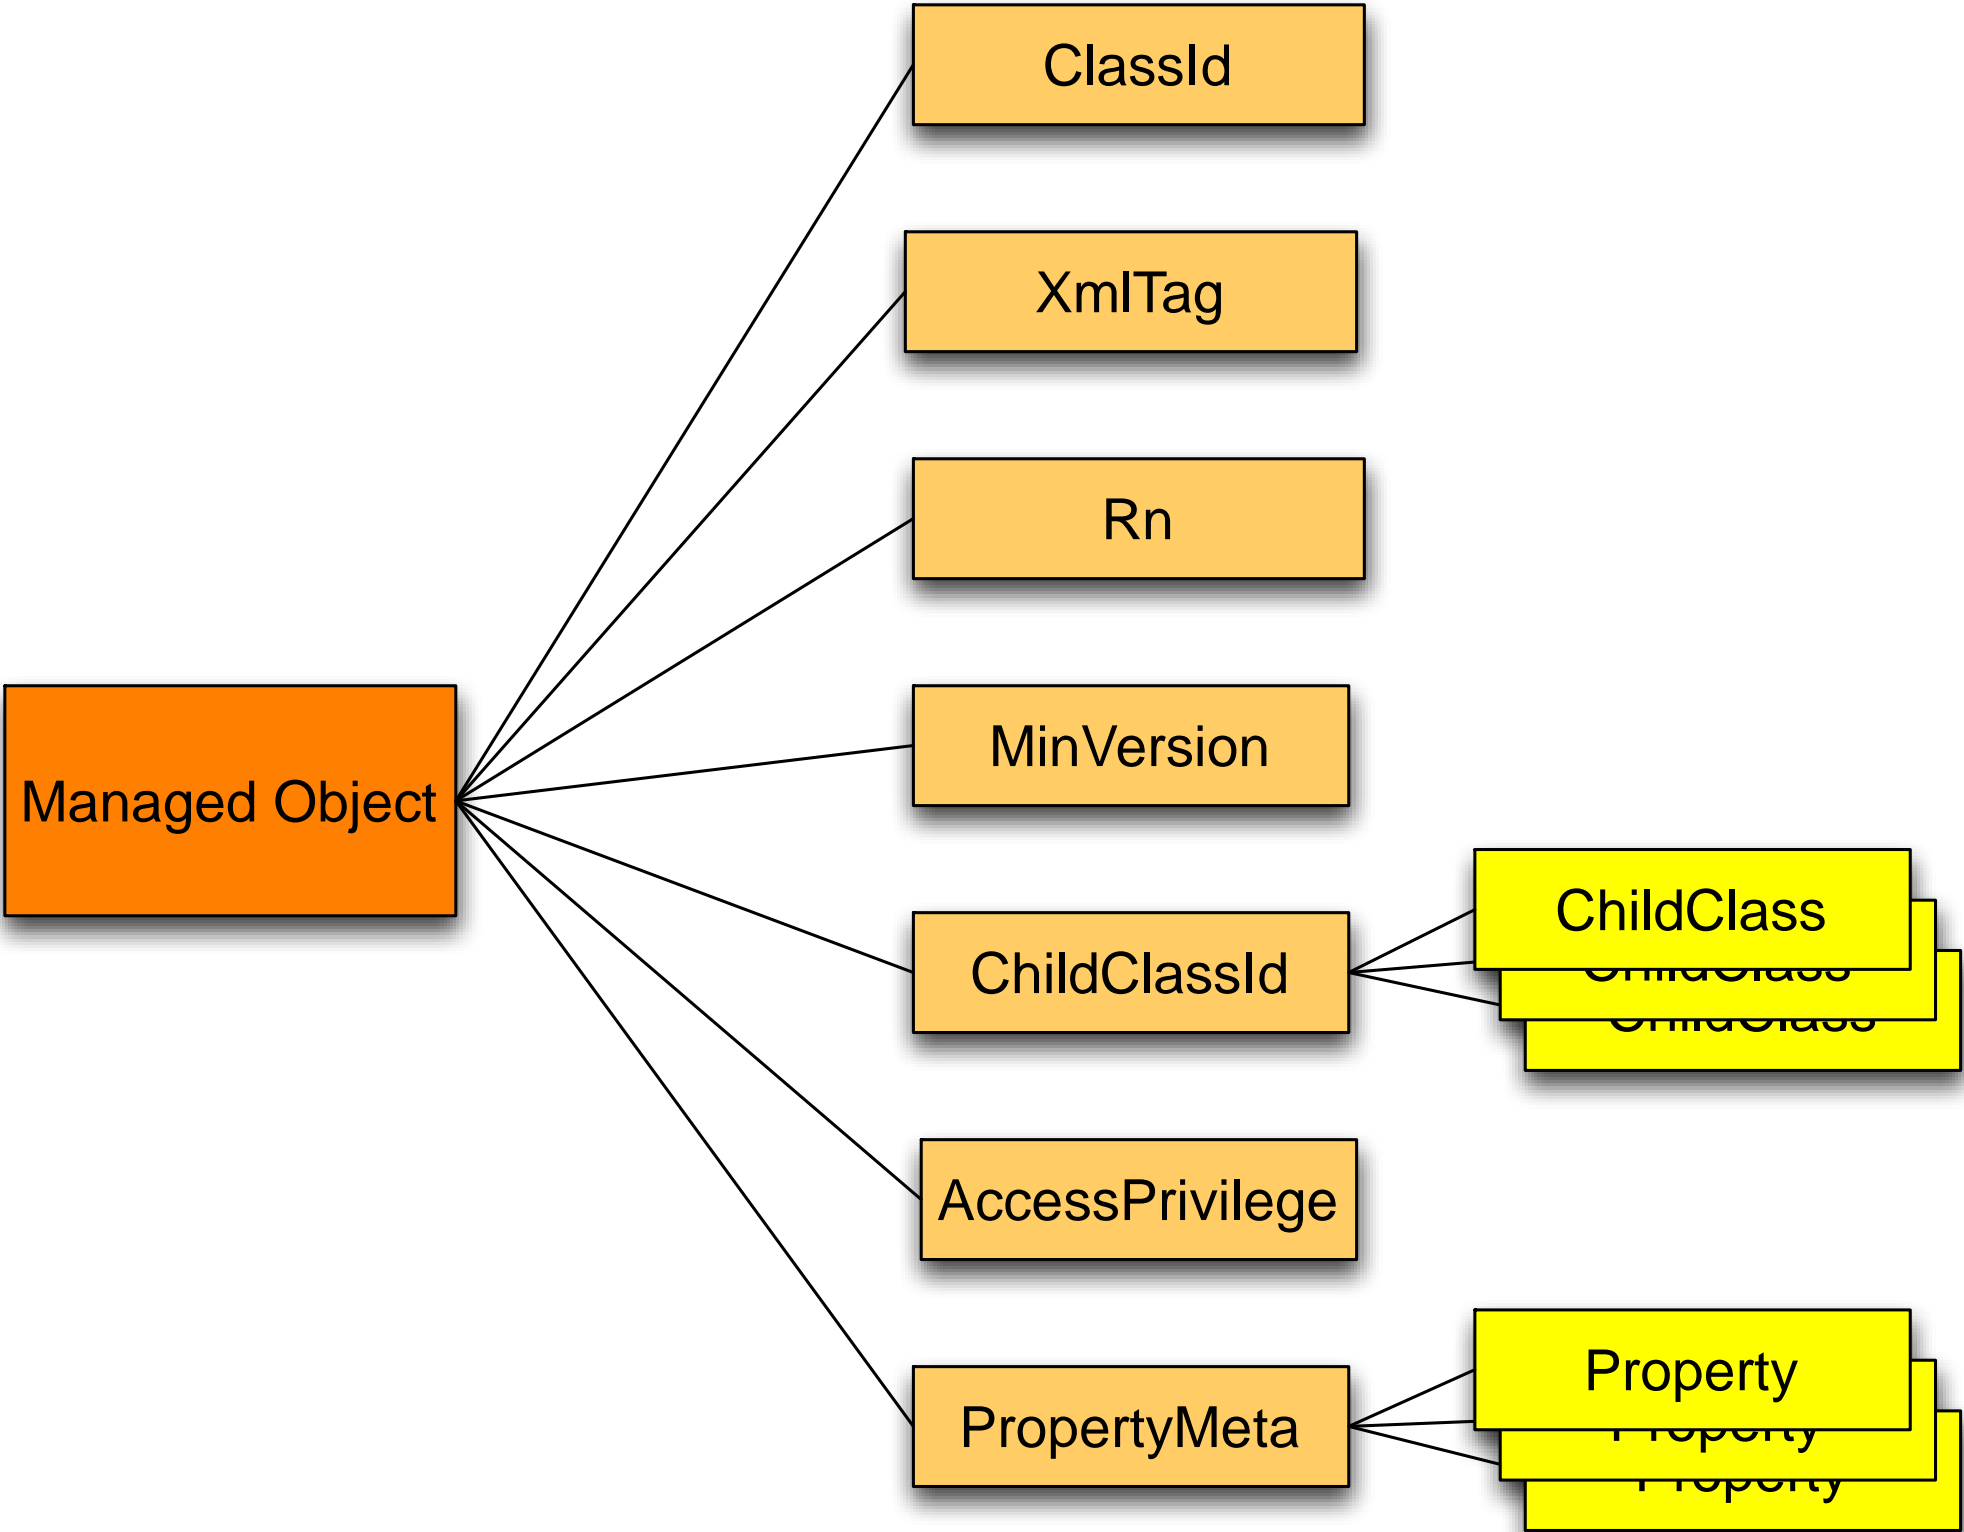

- Meta-model driven
- Object rules and behaviour
- MOs have a FSM child object
- Task schedule and execution

- Meta-model driven
- HW & SW components
- Stats, faults, events
- Model / Management Information Tree

- Object data mutations
- Replication to HA secondary
- Persistent storage
- Asynchronous and transactional

MO Meta Model

AG Layer

- Stateless agents
- Convert between native and MO representations

Application Gateways

Host AG

- Server inventory
- Interacts with EP via PNuOS
- RAID, BIOS firmware, 3rd Party Option ROMs
- Local disk scrub

NIC AG

- Adapters
- MAC, WWN

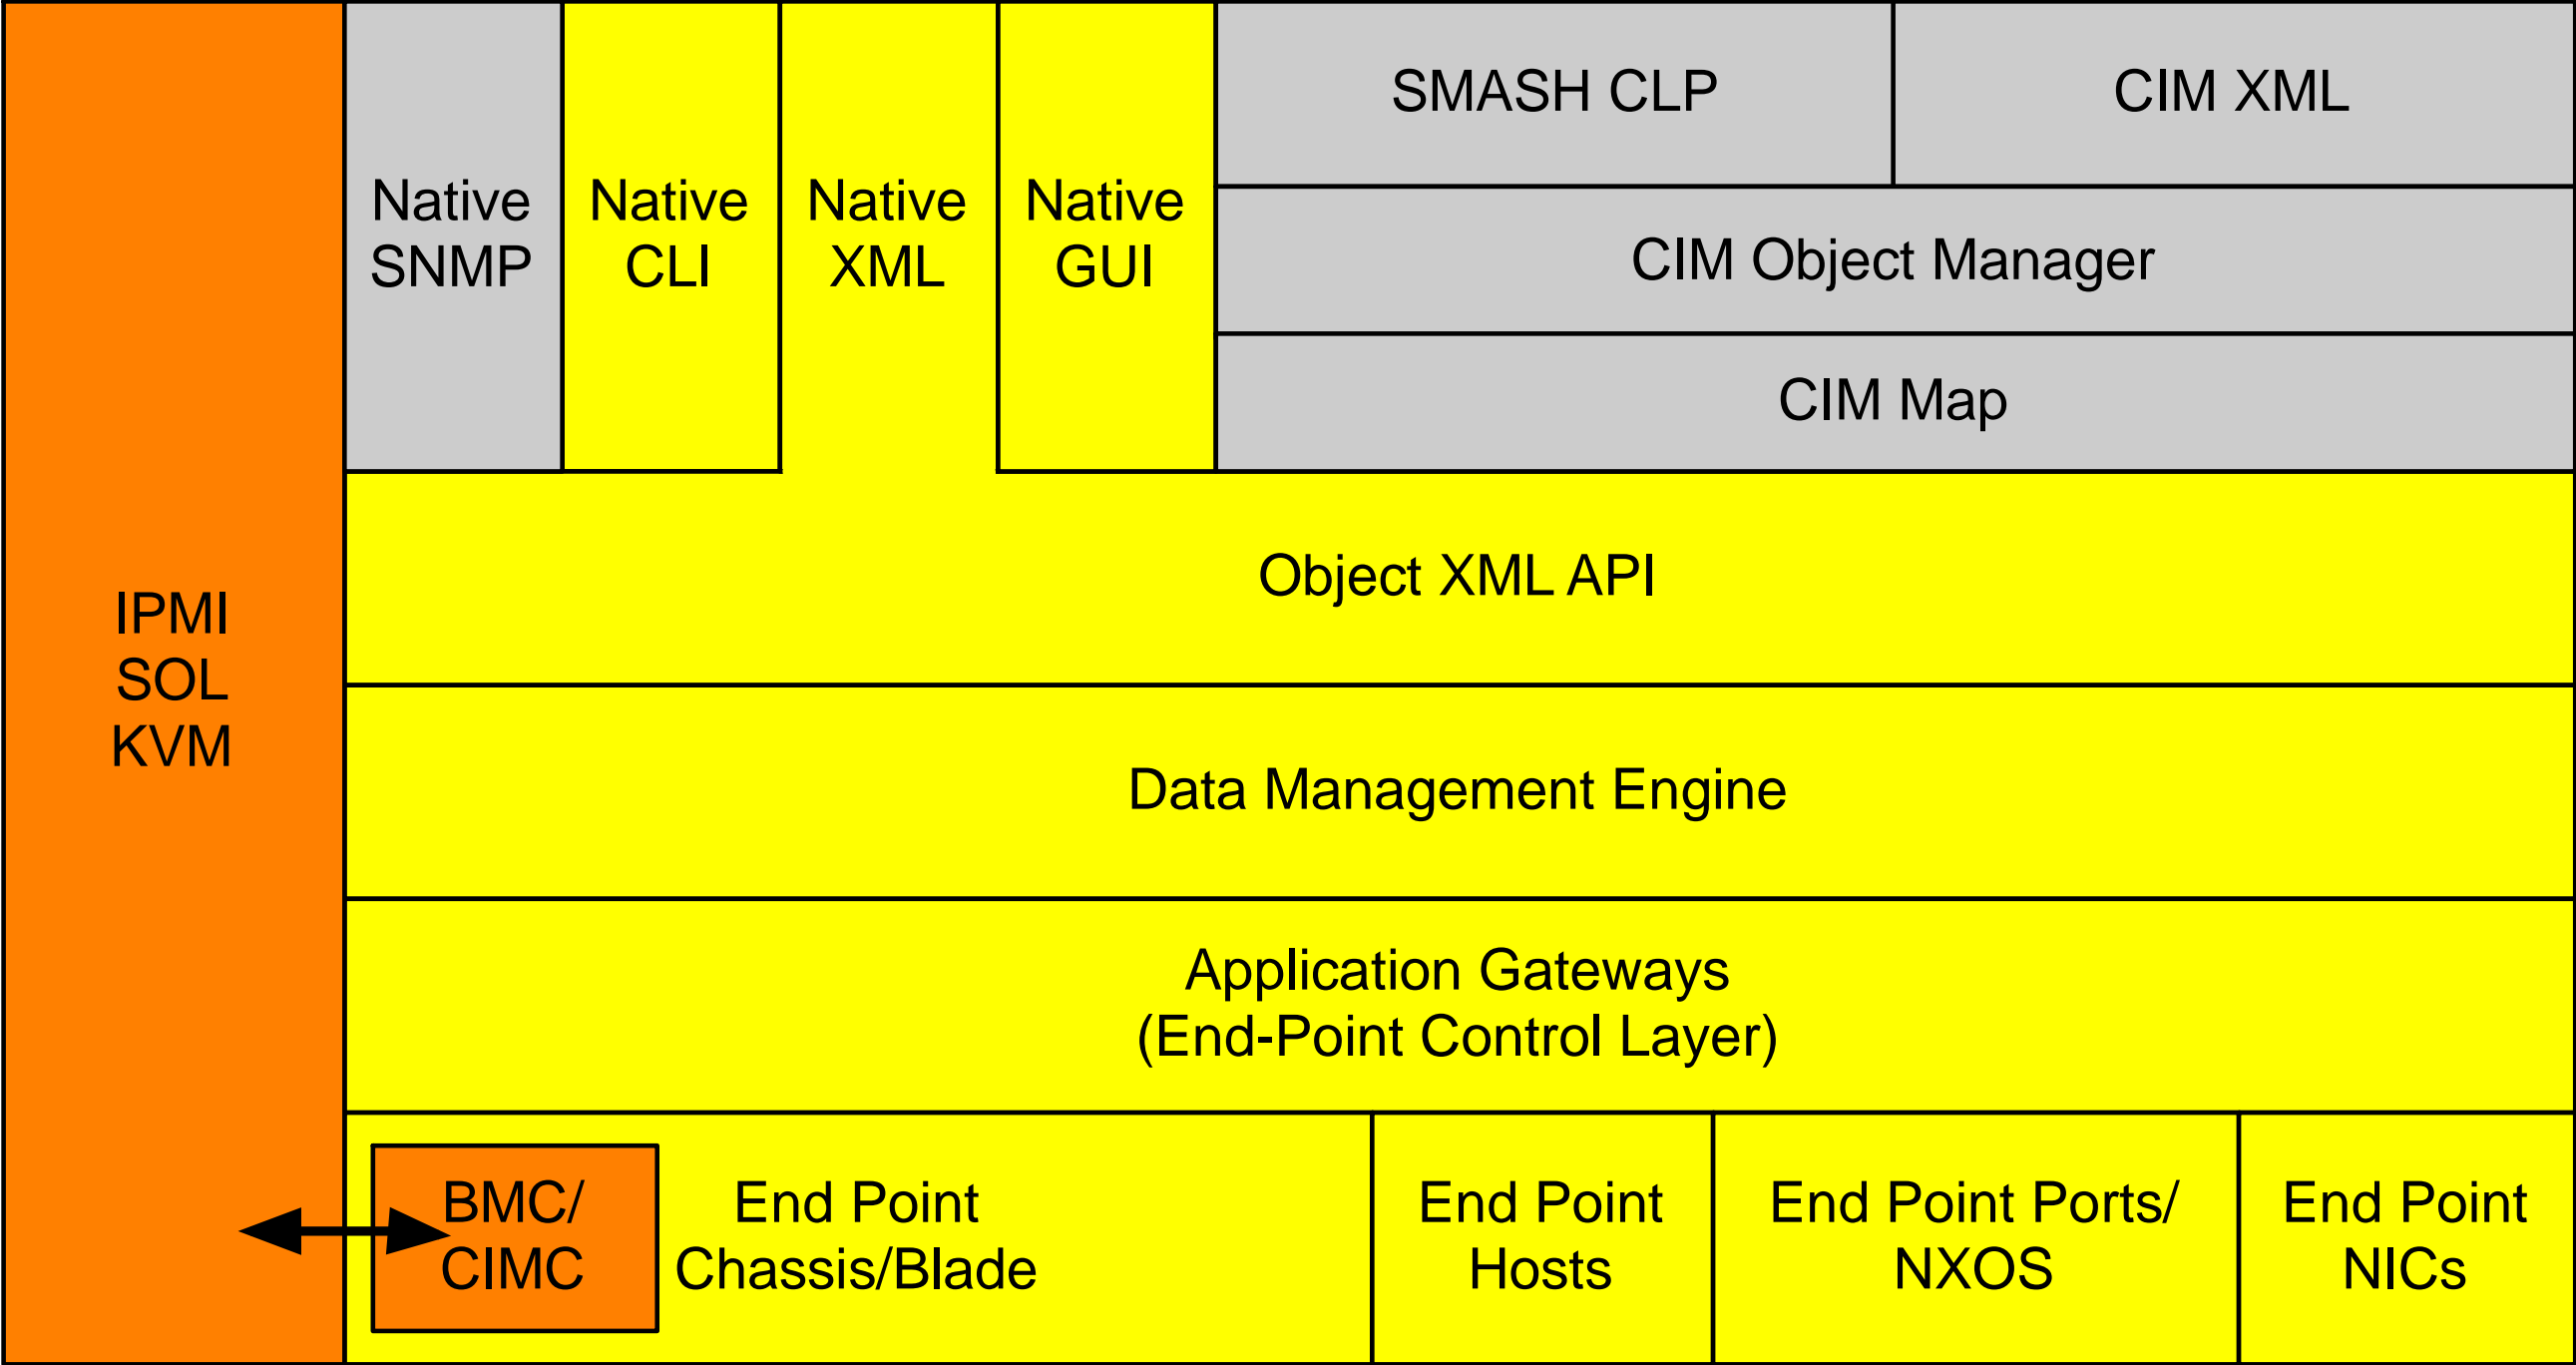

Blade/Chassis AG

- CMC
- BMC/CIMC
- Power on/off
- BIOS settings

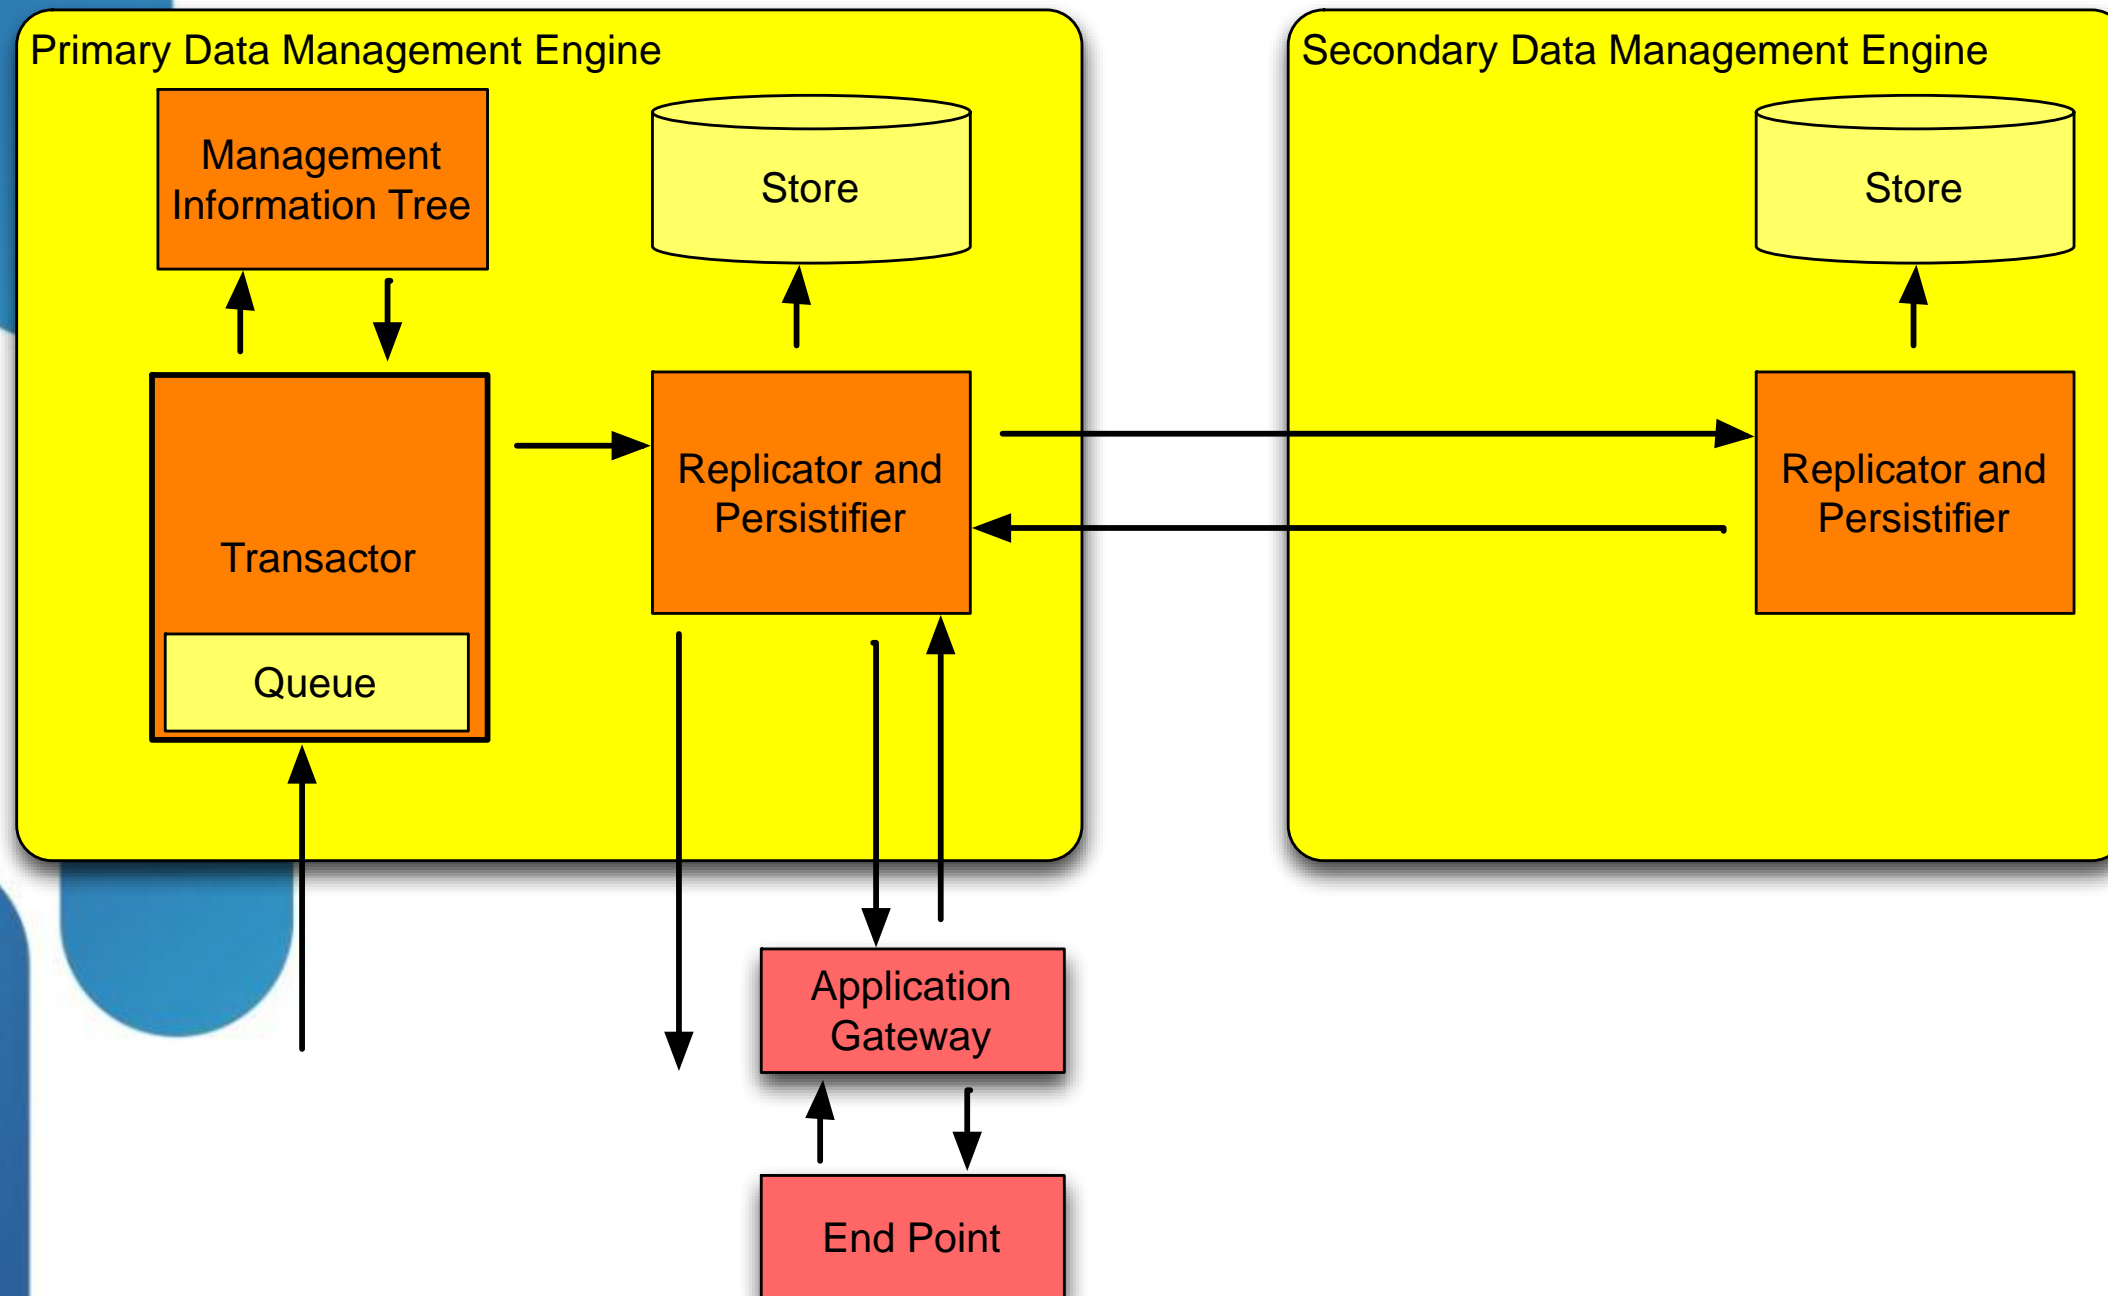

Port/NXOS AG

- Fabric interconnects
- VLANs
- port channels, trunks
- vNICs, vHBAs

System Interface Stack

Model Driven Framework

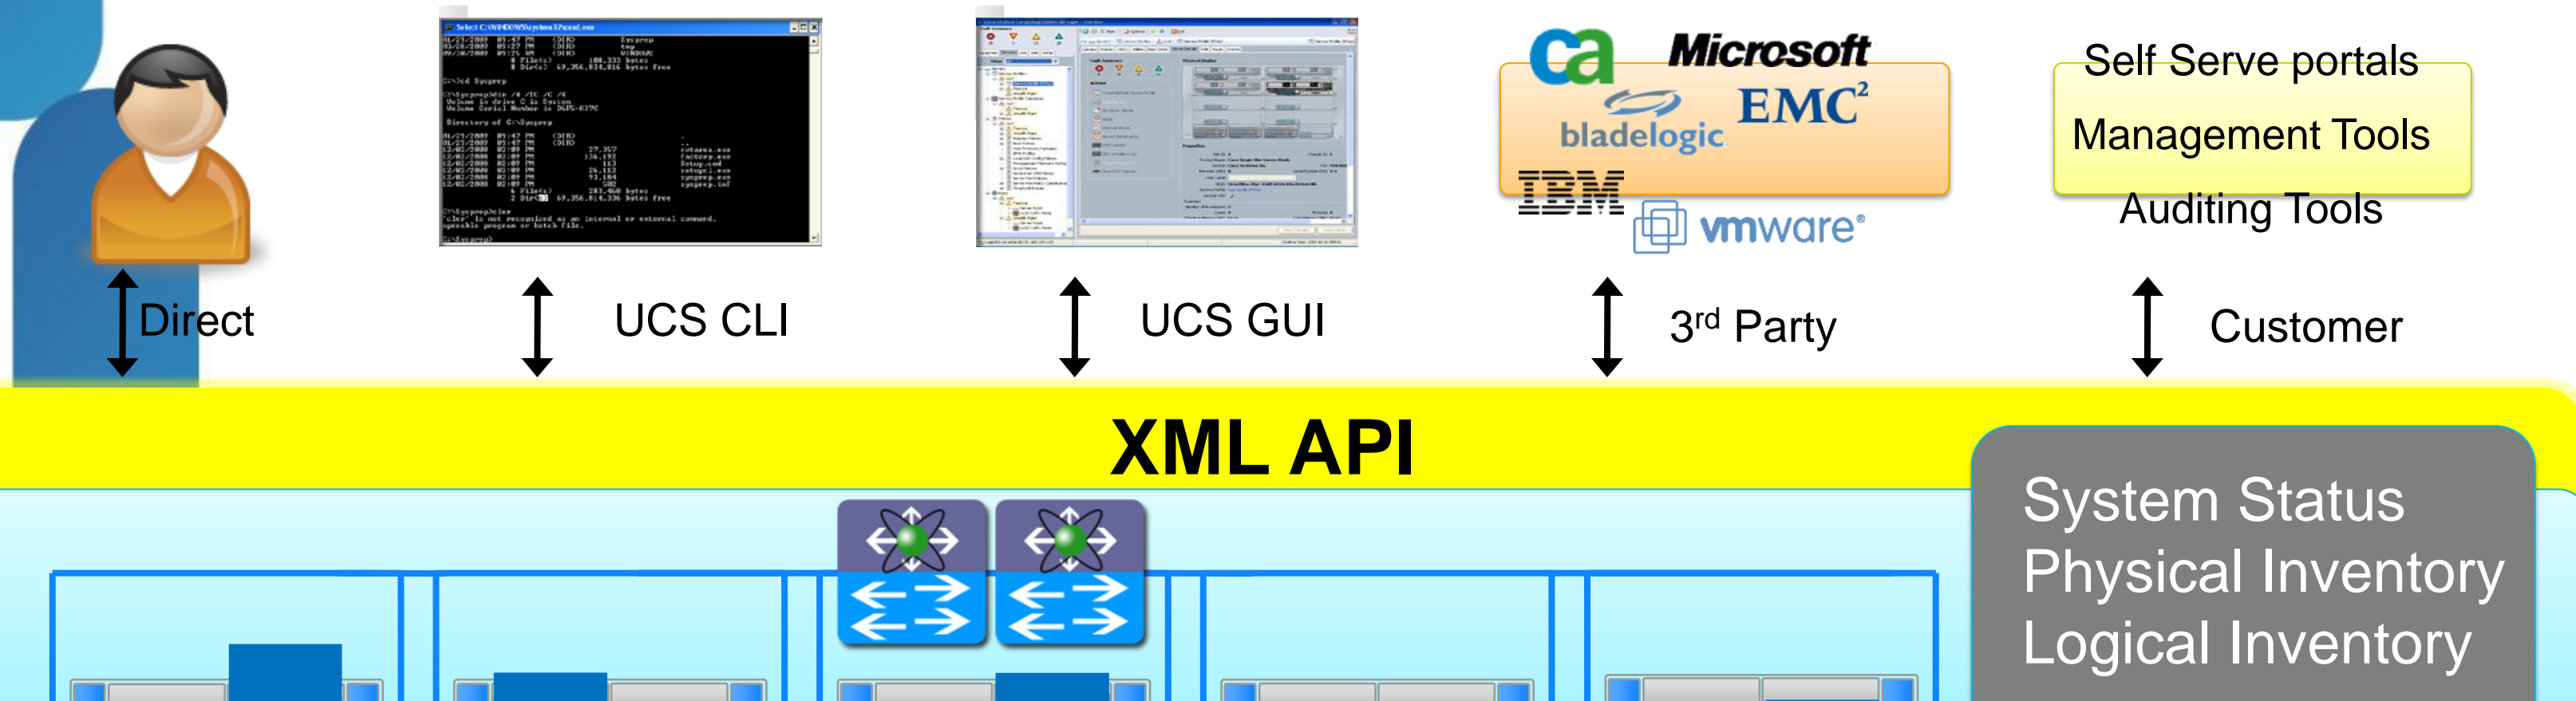

1. Config request
2. DME validates request
3. Apply config to MIT
4. Persist to DB
5. Persist to peer DB
6. Respond to client
(change events sent asynchronously)
7. Request to AG
8. Change to EP
9. AG polls new state from EP and updates MIT

XML API Overview

Programmatic Infrastructure

- Comprehensive XML API, standards-based interfaces
- Bi-Directional access to physical & logical internals

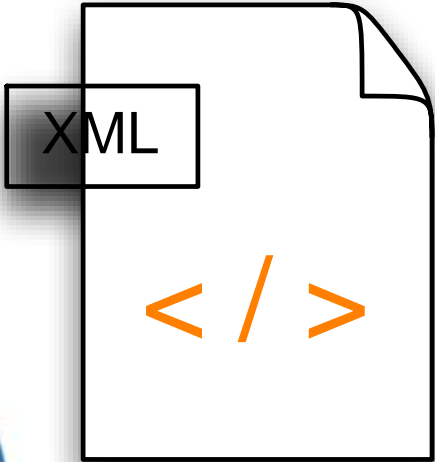

- Broad 3rd party integration support
- Faster custom integration for customer use cases
- Consistent data and views across ALL interfaces

UCS XML API Features Summary

- **Communicates over HTTP/HTTPS**
- **XML Based, Transactional**
- **XML Transactions are Order Agnostic**
- **Standard Request/Response cycle**
- **Role Based Authentication**
- **Object Model Hierarchy**
- **Built-in Object Browser**
- **Published Schema**
- **Java Doc Style documentation**
- **High Availability**
- **EventStream**

Communications

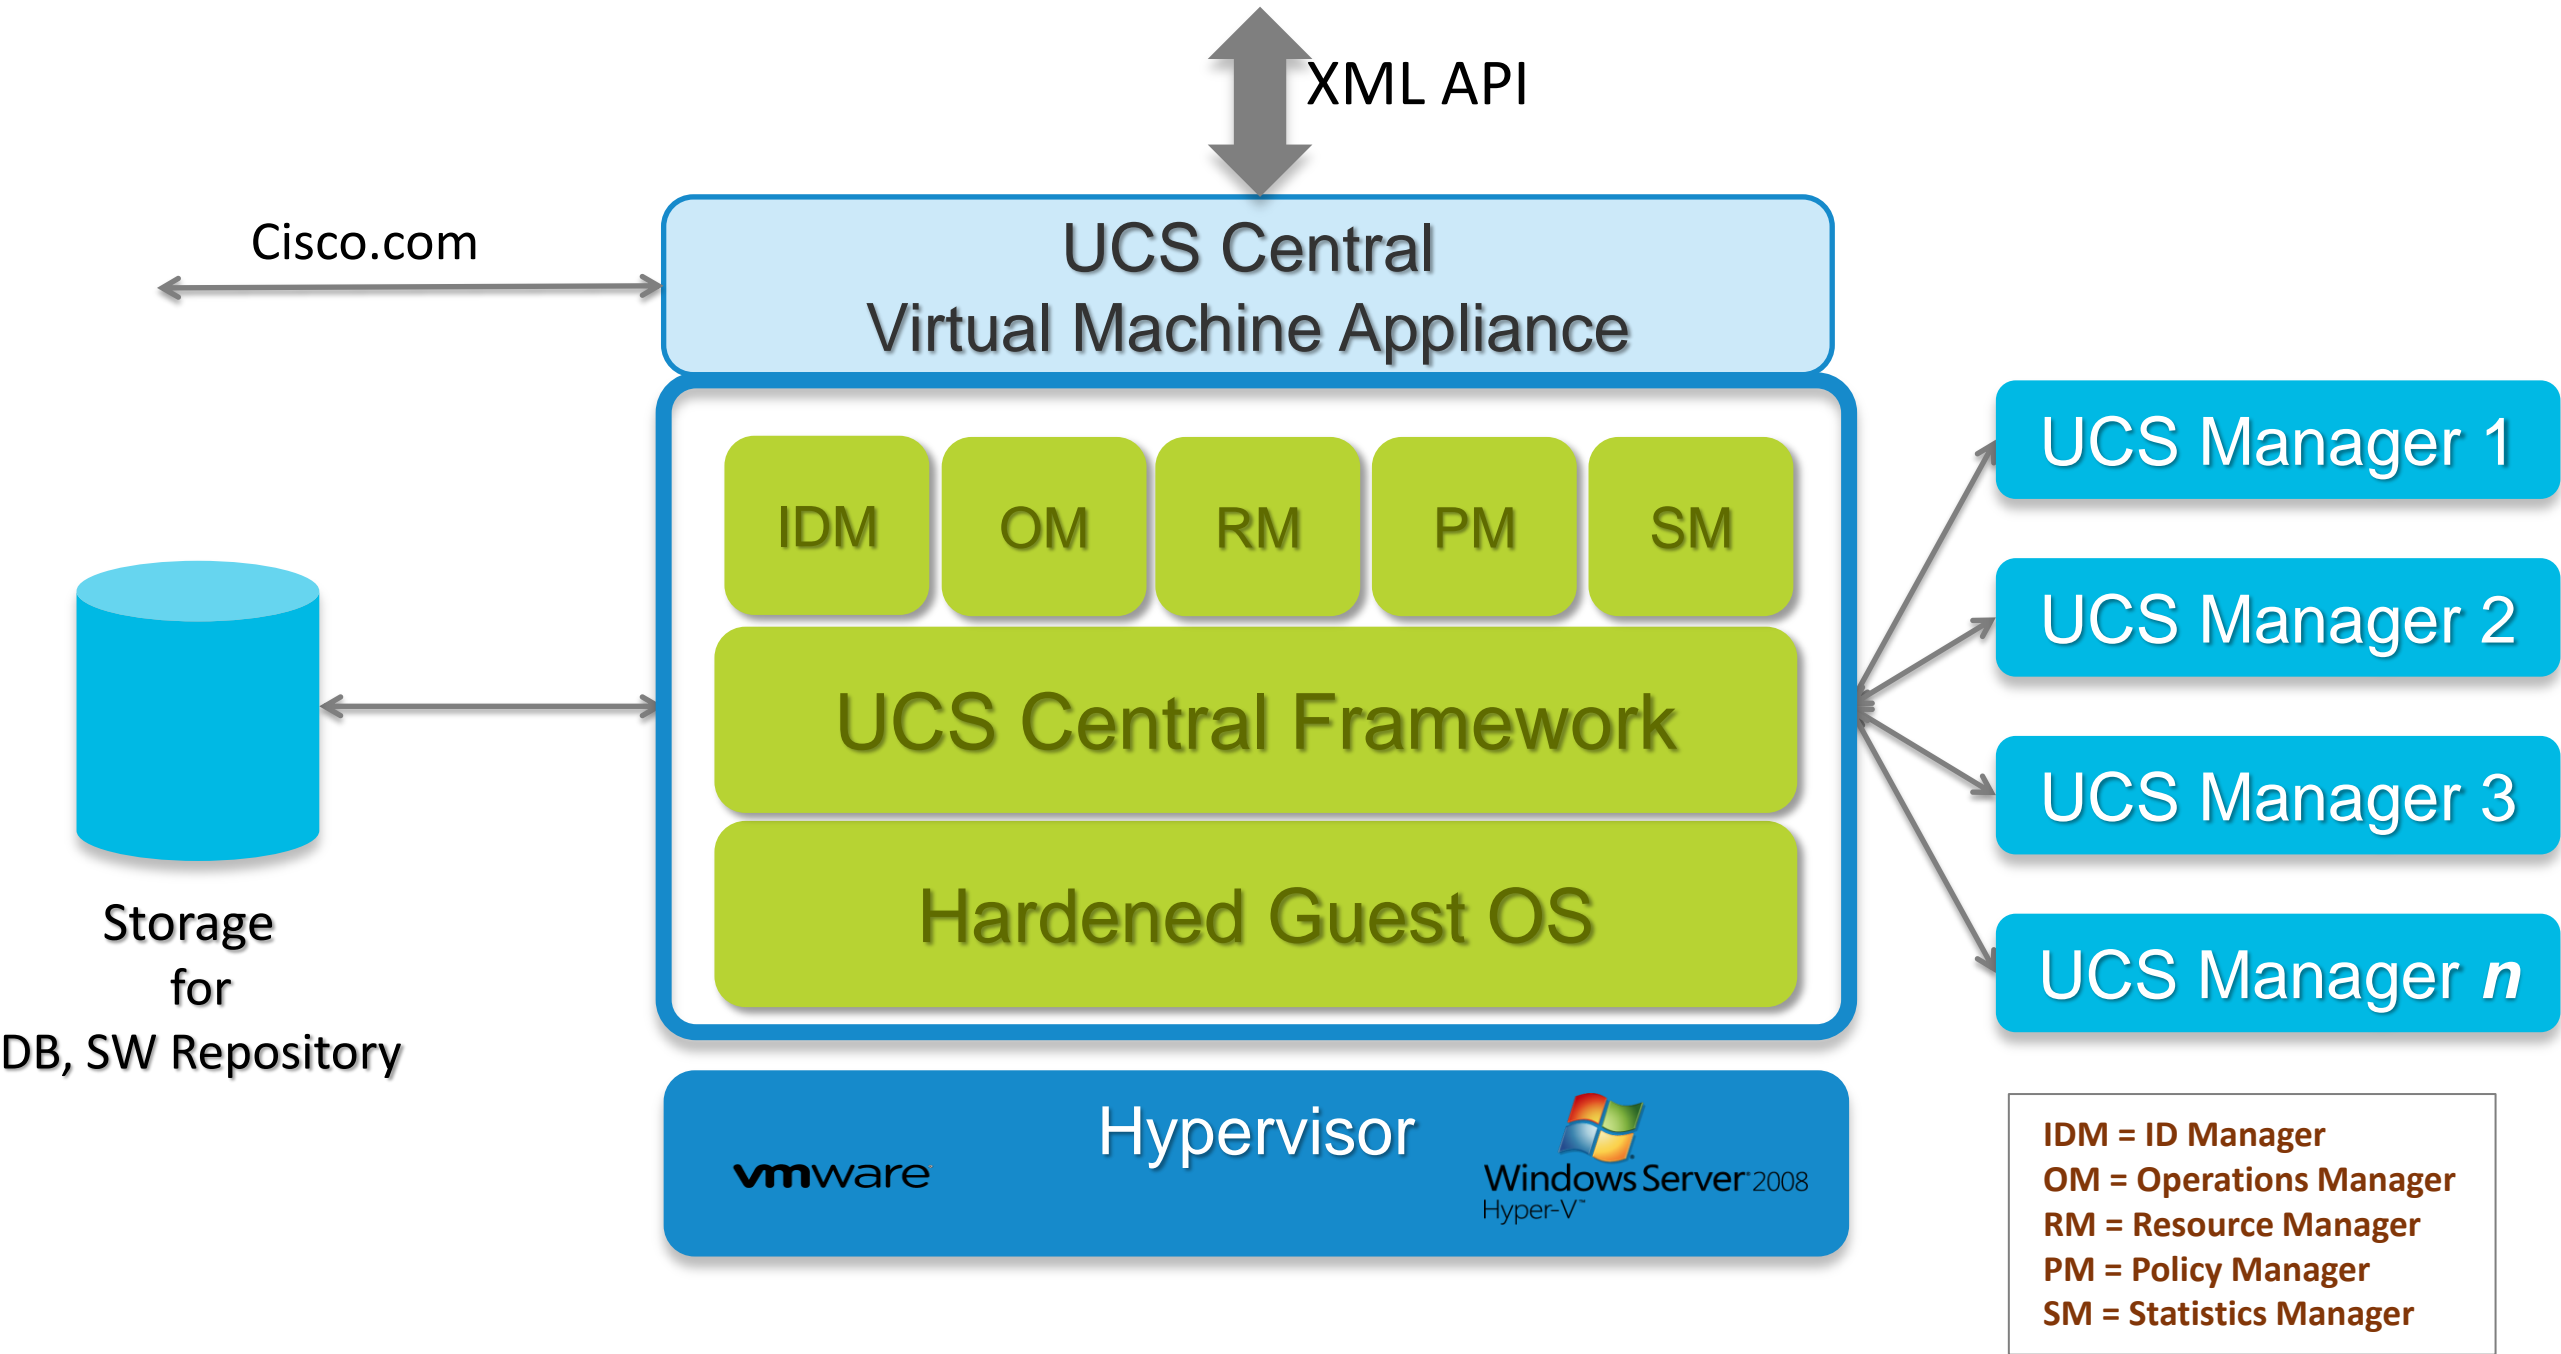

Request

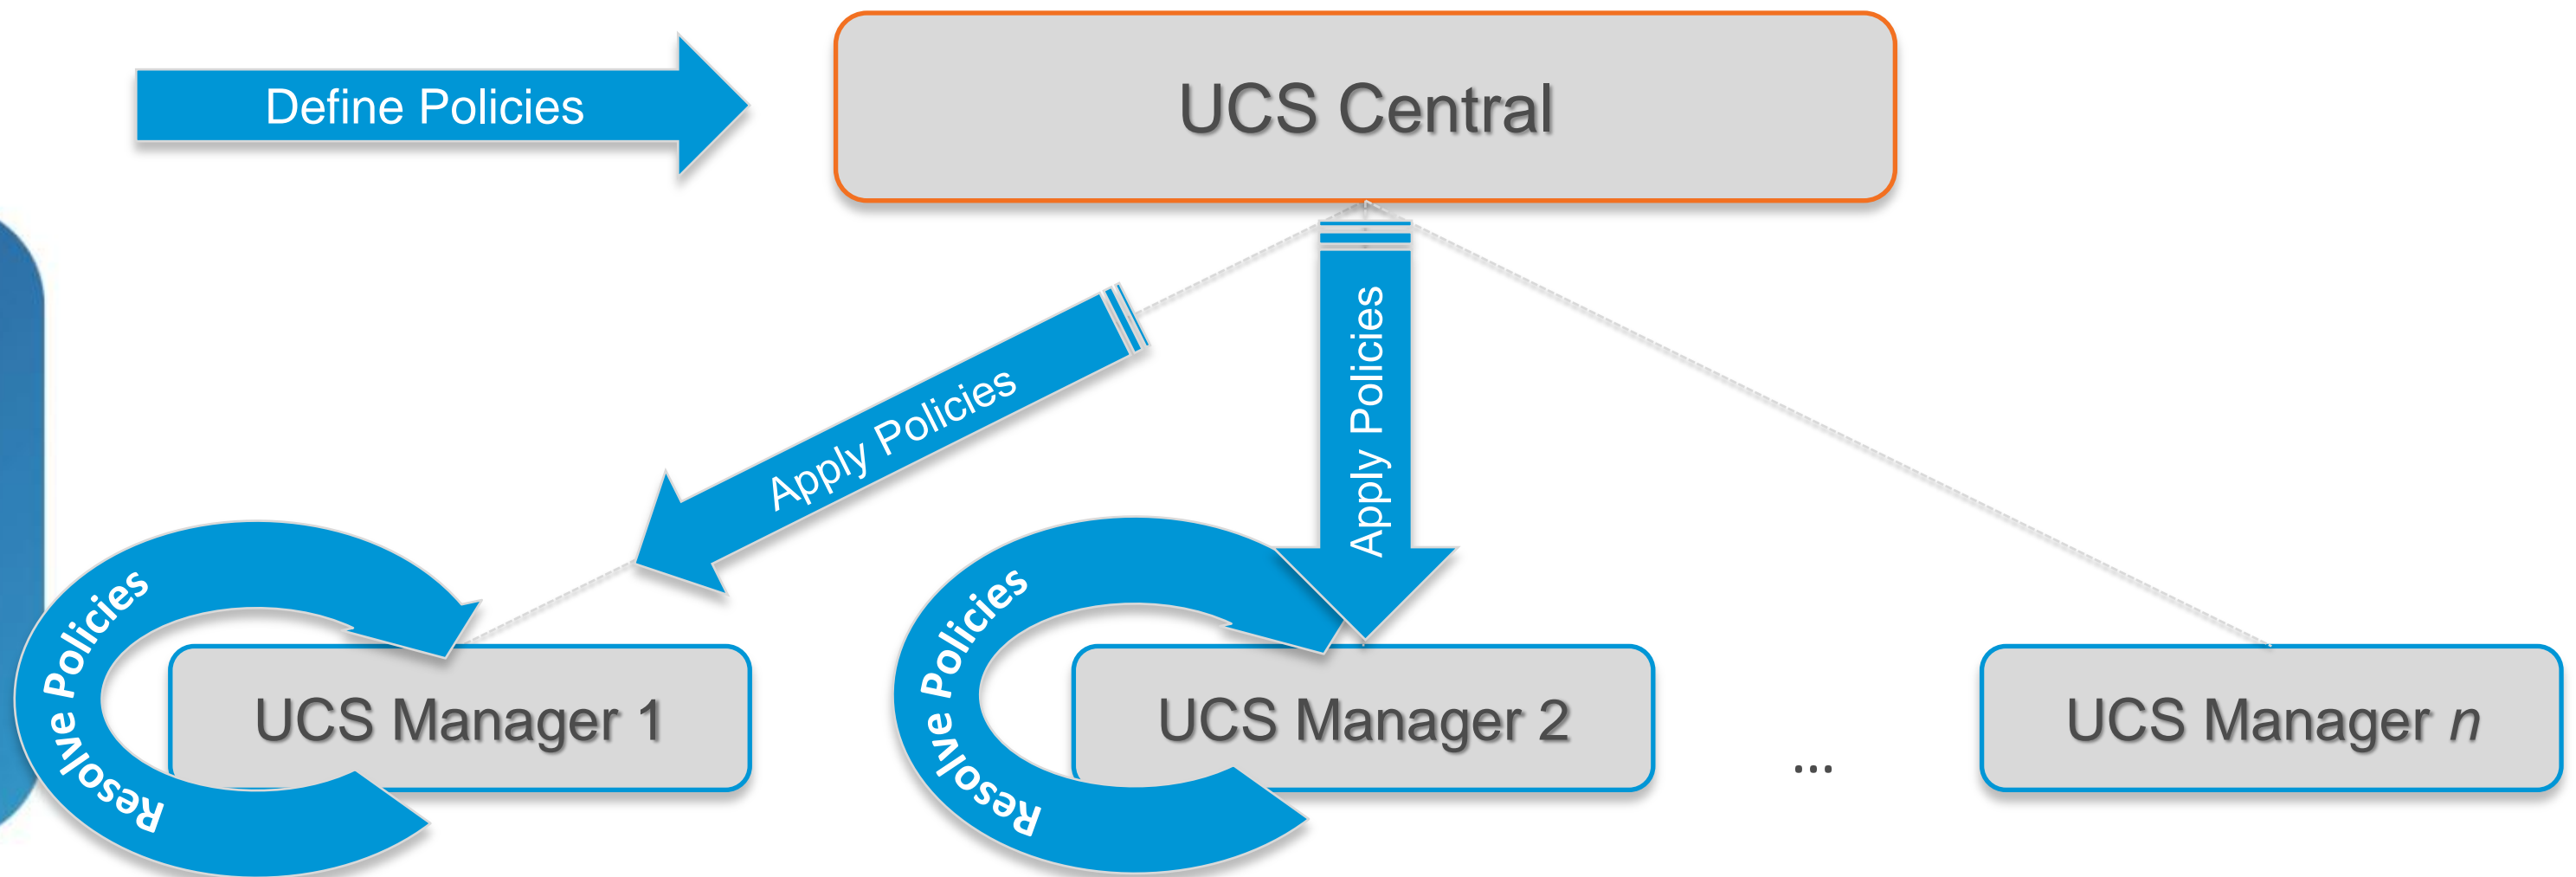

Response

UCS Central Architecture

UCS Manager

Policy Based Management

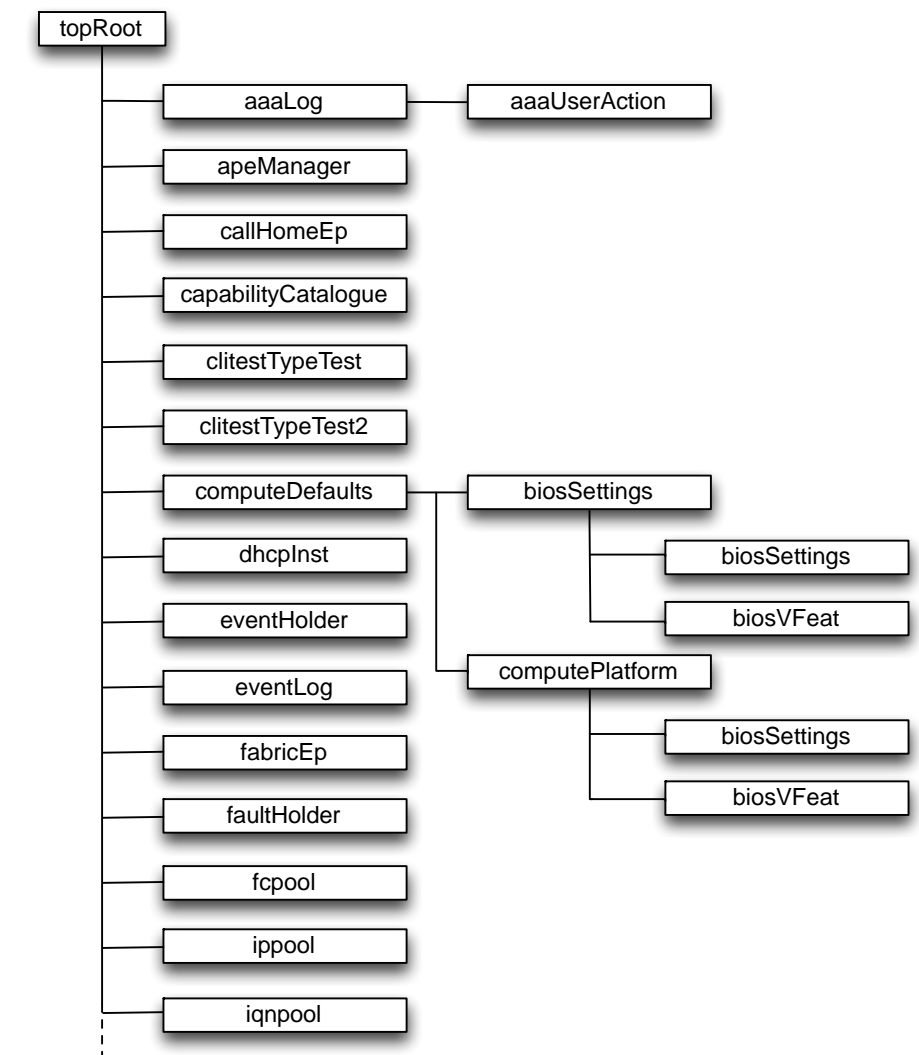

- Modeled identical to UCS Manager on how policies work
- UCS Central becomes the policy manager
- UCS Manager becomes the policy recipient and resolver

Management Information Model

Management Information Model

- A BIG tree structure of Managed Objects (MO)
- MOs represent physical and logical components
- Map to Object Classes
 - Containment (has a)
 - adaptor:Unit has a adaptor:ExtEthIf
 - Inheritance (is a)
 - Adaptor:ExtEthIf is a network:IfEp and has all of its properties
 - Relationships

Object Naming

- Object instances addressed by
 - Distinguished Name (DN)
 - Relative Name (RN)
- Naming convention
 - prefix-[namingproperty]
e.g. ls-testServer
 - dn = rn / rn / rn
e.g. dn = sys/chassis-1/blade-1/adaptor-1/ext-eth-1

DN maps to object class hierarchy

Documentation and Tools

XML API Programmer's Guide

http://www.cisco.com/en/US/docs/unified_computing/ucs/sw/api/ucs_api_book.html

- Introduction to the API
- Description of the Methods and Filters
- Example Request and Response strings
- Summary of role based access privileges

Cisco UCS Manager XML API Programmer's Guide

April 21, 2011

Model Documentation

<http://<yourUcsm>/docs/index.html>

Cisco Systems
UCSM Model Documentation

This document is the the starting point to explore the UCSM Information Model.

The Navigation frames on the left list:

- All Managed Objects
- All Methods
- All Types
- All Fault Rules
- All FSM Rules

Press a link to start navigating the model.

Abstract **Concrete** **Inheritance**

Containment Abstract

- [aaa:AuthMethod](#) This MO represents generic Authentication configuration.
- [aaa:Banner](#)
- [aaa:Config](#) This MO represents generic AAA configuration. Though today it is used only for Authentication configuration, Accounting configuration could derive from this MO in future
- [aaa:Definition](#)
- [aaa:Provider](#)
- [aaa:SystemUser](#)
- [aaa:UserGroup](#) Top level abstract MO representing the mapping of user's group to roles and locales
- [aaa:UserLogin](#) Represents a successful User Login session

Object Browser

<http://<yourUcsm>/visore.html>

The screenshot shows the UCSM Visore web interface. At the top, the browser title is "Children of MO" and the address bar shows "http://10.0.0.23/visore.html". The page header includes "UCSM Visore" and "(c) 2006-2009 Cisco Systems, Inc.". Below the header is a "Filter" section with input fields for "Class or DN:", "Property:", "Op:" (set to "==" in a dropdown), "Val1:", and "Val2:". A "Run Query" button is located below these fields. A link "Display XML of last query" is also present. The main content area displays "Total objects shown: 25" and a table of objects. The table has columns for object names and their details. The objects listed are "computeDefaults", "topSysDefaults", and "capabilityCatalogue".

| computeDefaults | | ? |
|---------------------|----------------------|---|
| dn | compute-defaults < > | |
| topSysDefaults | | ? |
| dn | sys-defaults < > | |
| capabilityCatalogue | | ? |
| dn | capabilities < > | |
| fsmDescr | | |
| fsmPrev | nop | |
| fsmProgr | 100 | |
| fsmRmtInvErrCode | none | |
| fsmRmtInvErrDescr | | |
| fsmRmtInvRslt | | |
| fsmStageDescr | | |

Cisco Developer Connection

<http://developer.cisco.com/web/unifiedcomputing/home>

- How to become part of the developer community
- Access to documentation
- Access to Cisco and 3rd Party tools and plugins
- Sample scripts
- Blogs and discussion forums

The screenshot shows the Cisco Developer Network website for UCS Manager. The header includes the Cisco logo, the title "Cisco Developer Network", and navigation links for Membership, Technologies, Community, Technology Partners, and News & Events. There are also links for 日本語, Developer Dashboard, Settings, and Log Out, along with a Search CDN input field. The main content area is titled "UCS Manager" and includes a breadcrumb trail: UCS Manager | UCS Management Ecosystem | Forums | Blogs | Documentation | UCS Labs | Flexpod. Below this is a section titled "UCS Manager" with a description: "The Cisco Unified Computing System (UCS) includes an innovative XML API which offers you a programmatic way to integrate or interact with any of the over 9,000 managed objects in UCS. Managed objects are abstractions of UCS physical and logical components such as adaptors, chassis, blade servers, and fabric interconnects." It also states: "Developers can use any programming language to generate XML documents containing UCS API methods. The complete and standard structure of the UCS XML API makes it a powerful tool that is simple to learn and implement." and "UCS is only on-boarding partners that are interesting in software development and integration with UCS Manager." There are three columns of content: "What Is It?" with an "Overview" link and description "Explore UCS Manager and the business benefits it provides"; "How Do I Get Started?" with a "Getting Started" link and description "Learn what is required to download or further develop with the UCS Manager"; and "What Resources Are Available?" with a "Resources" link and description "Access resources that will help you utilize and learn UCS Manager". On the right side, there is a "Navigation" section with a list of links: UCS Manager (Overview, Getting Started, Resources, UCS Automation Tool (goUCS), Server and Host Management API), UCS Management Ecosystem, Forums, Blogs, Documentation, UCS Labs, and Flexpod. At the bottom right, there is another "Search CDN" input field with a "Go" button.

UCS Platform Emulator

- <http://developer.cisco.com/web/unifiedcomputing/ucsemulator/download>
- Linux VM
- Provides full API and CLI emulation for UCSM
- Drag-Drop GUI build tool

System Requirements

- VMware
 - Player
 - Workstation
 - Fusion
 - ESX
- 1GB free RAM
- 8GB disk
- 1.8Ghz single CPU
- Mozilla compatible browser
- JRE 1.6

The screenshot displays the Cisco UCS Platform Emulator v2.0(90701.367450) interface. The main window shows the UCS Manager Control Panel with a hardware inventory view. The interface includes a navigation menu on the left with options like 'Start-up Inventory' and 'Hardware Catalog'. The main content area shows details for two chassis: Chassis 1 (chassis 1) and Chassis 2 (chassis 2). Chassis 1 has 8 servers, 8 fans, and 4 PSUs. Chassis 2 has 7 servers, 8 fans, and 4 PSUs. A 'Blades' tab is selected, showing a table of server components.

| Item | Description | Vendor | Part No | PID |
|---|--|---------------------|------------|-------------|
| Cisco UCS B200 M1 2 Socket Blade Server | 2 Socket, Single slot Blade Server, 12 DIMMs, 2 SFF HDDs, Intel Xeon 5500 series, 1 Mezz. Slot | Cisco Systems, Inc. | 74-5390-01 | N20-B6620-1 |

goUCS

- Java based tool developed by UCS Technical Marketing team
- Fully documented
- Uses a wrapper paradigm to abstract programmatic details from the developer and deliver a flexible command line tool (http only)
- XML wrapper
`goucs class realtime table:*:dn-numOfCpus-totalMemory computeBlade false`
- CMD wrapper
`goucs listblades_cpu_mem`
- Filterlog
- Transaction
- Connect

System Requirements

- Windows XP, 7, Server 2008
- JRE 1.6

goUCS XML Wrapper Syntax

```
goucs <session> <xmlWrapper> <processType> <outputType> <userArgs>
```

Where:

<session> = session identifier, default or all

<xmlWrapper> = the wrapper to execute

<processType> = realtime, raw or cached

<outputType> = indent, xml, quiet, xpath, csv or table + format and filters

<userArgs> = user input such as a class name or variables

Examples:

```
goucs all class realtime table*:dn-numOfCpus-mem computeBlade
```

```
goucs default createvlan realtime quiet XXX 3000
```

goUCS Command Wrapper Syntax

```
goucs <session> <cmdWrapper> <userArgs>
```

Where:

<session> = session identifier, default or all

<cmdWrapper> = the wrapper to execute

<userArgs> = user input such as or variables

Example:

```
goucs addVlan XXX 3000
```

goUCS Filterlog Syntax

```
goucs filterlog [logfile] <replace> <search> <trig1>...<trigN>
```

```
goucs filterlog logtail [eof]
```

Where:

<logfile> = name of the UCSM GUI log to parse

<replace> = replace cookie and argument strings in the output

<search> = ignore keyword or a text filter string

<trigX> = text string to replace with an argument variable

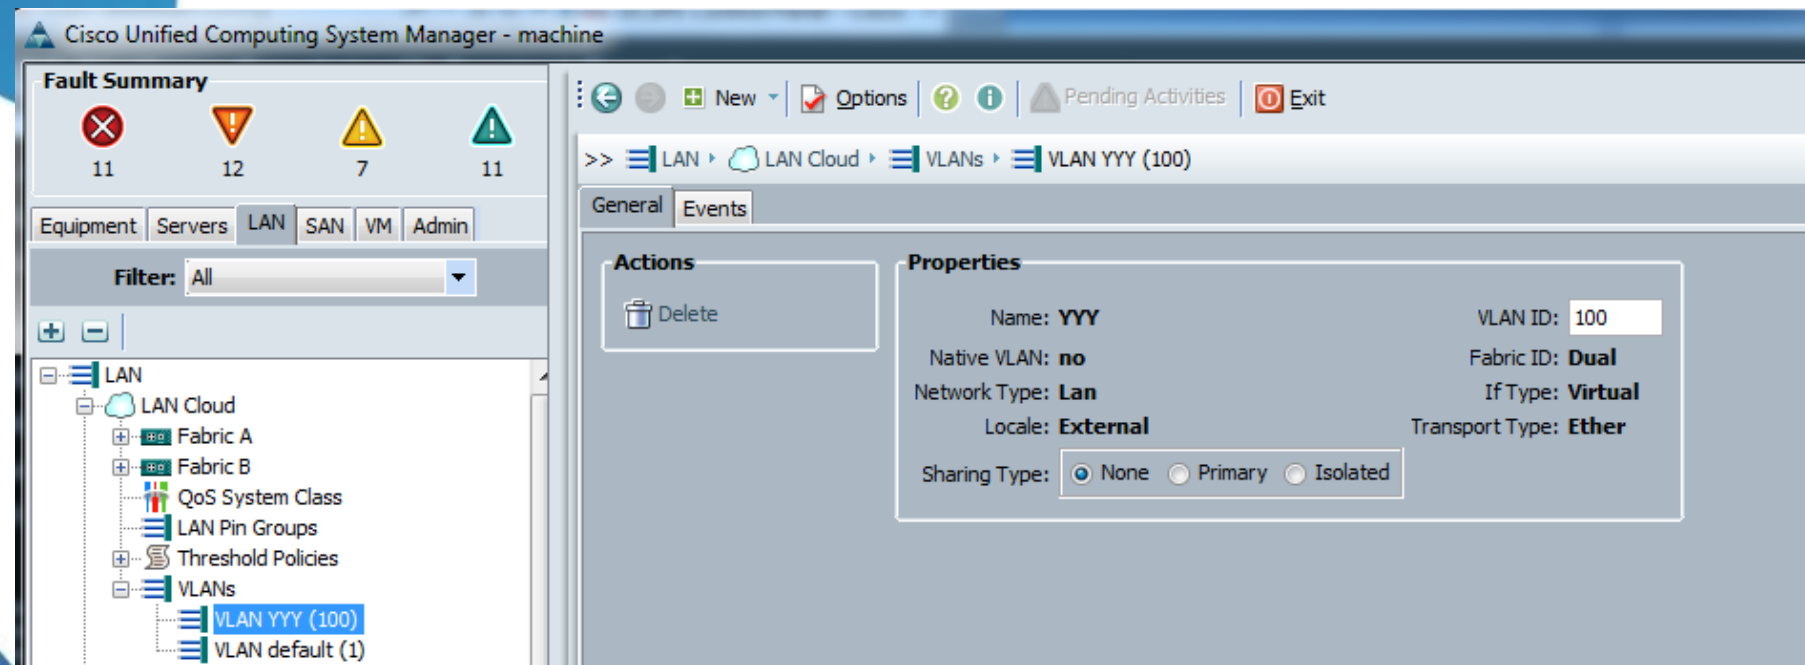

or #<text>:<tag> to replace a tag

or #<text>:* to replace everything in double quotes

Example:

```
goucs filterlog trueco ignore YYY #id:100
```

goUCS Filterlog Example

```
c:\goucs>goucs filterlog trueco ignore YYY #id:100
<configConfMos
  cookie="$COOKIE$" inHierarchical="true">
</inConfigs>
<pair key="fabric/lan/net-$ARG1$">
<fabricVlan
  defaultNet="no"
  dn="fabric/lan/net-$ARG1$"
  id="$ARG2$"
  name="$ARG1$"
  pubNwName=""
  sharing="none"
  status="created">
</fabricVlan>
</pair>
</inConfigs>
</configConfMos>
```

```
c:\goucs>
```

API Methods and Filters

API Method Types

- Authentication – login and logout
- Query – View MOs and attribute values
- Configuration – Create and modify MOs and attributes
- Event Subscription – Monitor system events

Authentication Methods

aaaLogin – Initial login

aaaKeepalive – keep the session open

aaaRefresh – Refresh current authentication cookie (600second expiry)

aaaLogout – Exit the session and deactivate the cookie

```
<aaaLogin  
  inName="cliuser"  
  inPassword="cliuser">  
</aaaLogin>
```

Query Methods

configResolveDn – Retrieve MOs by DN

configResolveDns – Retrieve MOs by a set of DNs

configResolveClass – Retrieve MOs of a specified class

configResolveClasses – Retrieve MOs of multiple classes

configFindDnsByClassId – Retrieves DNs of a specified class

configResolveChildren – Retrieves the child MOs of a MO

configResolveParent – Retrieves the parent MO of a MO

configScope – Performs class queries on a DN

Query Samples

```
<configResolveDn
  dn="sys"
  inHierarchical="false">
</configResolveDn>
```

```
<configResolveClasses
  inHierarchical="false">
  <inIds>
    <classId value="computeBlade"/>
    <classId value="equipmentIOCard"/>
  </inIds>
</configResolveClasses>
```

Query filters

Simple filters

- True filter – boolean true

- False filter – boolean false

Property filters

- Equality filter – eq

- Not equal filter – neq

- Greater than filter – gt

- Greater than or equal filter – ge

- Less than filter - lt

- Less than or equal filter – le

- Wildcard filter – wcard. “%” or “*” (any sequence of characters), “?” or “-” (any single character).

Filter Sample

```
<configResolveClass inHierarchical="false" cookie="1329083125/3b45fea1-77fb-4f53-b67a-dfc2edb29845" classId="computeBlade">  
  <inFilter>  
    <and>  
      <eq class="computeBlade" property="numOfCores" value="8"/>  
      <gt class="computeBlade" property="availableMemory" value="8192"/>  
    </and>  
  </inFilter>  
</configResolveClass>
```

Filter Sample 2

```
<configResolveClass inHierarchical="false" cookie="1329083125/3b45fea1-77fb-4f53-b67a-dfc2edb29845" classId="computeBlade">
  <inFilter>
    <bw class="computeBlade"
      property="availableMemory"
      firstValue="4000"
      secondValue="66000"/>
  </inFilter>
</configResolveClass>
```

Configuration Methods

`configConfMo` – configures a single subtree (DN)

`configConfMos` – configures multiple subtrees (several DNs)

`configConfMoGroup` – makes the same changes to multiple subtree structures or MOs

Configuration Sample

```
<configConfMos
  cookie="1329083125/3b45fea1-77fb-4f53-b67a-dfc2edb29845"
  inHierarchical="true">
  <inConfigs>
    <pair
      key="fabric/lan/net-SIN">
      <fabricVlan
        defaultNet="no"
        dn="fabric/lan/net-SIN"
        id="104"
        name="SIN"
        pubNwName=""
        sharing="none"
        status="created">
      </fabricVlan>
    </pair>
  </inConfigs>
</configConfMos>
```

Event Subscription Method

eventSubscribe – register to receive event notifications

```
<eventSubscribe  
  cookie="1329094394/eda7c20e-3cd4-4265-8332-110cfef56f17">  
</eventSubscribe>
```

Working Examples

Hello World

```
$ telnet 10.0.0.23 80
```

```
Trying 10.0.0.23...
```

```
Connected to 10.0.0.23.
```

```
Escape character is '^]'.  
POST /nuova HTTP/1.1
```

```
Host: 10.0.0.23
```

```
Content-Length: 60
```

```
<aaaLogin inName="cliuser" inPassword="cliuser"/>
```

```
HTTP/1.1 200 OK
```

```
Date: Thu, 09 Feb 2012 01:59:05 GMT
```

```
Server: Apache/2.2.17 (Unix) mod_ssl/2.2.17 OpenSSL/FIPS
```

```
Content-Length: 426
```

```
Content-Type: application/soap+xml
```

```
<aaaLogin cookie="" response="yes" outCookie="1328752745/22003f61-fe00-455d-9494-22bbe857e512" outRefreshPeriod="600"  
outPriv="aaa,admin,ext-lan-config,ext-lan-policy,ext-lan-qos,ext-lan-security,ext-san-config,ext-san-policy,ext-san-  
security,fault,operations,pod-config,pod-policy,pod-qos,pod-security,read-only" outDomains="org-root" outChannel="noencssl"  
outEvtChannel="noencssl" outSessionId="" outVersion=""> </aaaLogin>
```

```
Connection closed by foreign host.
```

```
$
```

Game Cheat

Where is the UCSM Client Log file?

`%userprofile%\AppData\LocalLow\Sun\Java\Deployment\log\ucsm`

Note: AppData is a hidden folder

[----- Sending Request to Server -----]

```
<aaaLogin  
inName="cliuser"  
inPassword="cliuser">  
</aaaLogin>
```

-----]

[-----debugBuffer-----]

```
<aaaLogin cookie="[hidden]" response="yes" outCookie="[hidden]" outRefreshPeriod="600" outPriv="aaa,admin,ext-lan-  
config,ext-lan-policy,ext-lan-qos,ext-lan-security,ext-san-config,ext-san-policy,ext-san-security,fault,operations,pod-  
config,pod-policy,pod-qos,pod-security,read-only" outDomains="org-root" outChannel="noencssl"  
outEvtChannel="noencssl" outSessionId="" outVersion=""> </aaaLogin>
```

-----]

Example in PERL

The following script

- Authenticates with UCSM with user provided credentials
- Can send a single-quoted multiline string to UCSM
- Can subscribe to the UCSM event stream
- Returns the response from UCSM
- Does NO syntax checking of the user provided string
- Output can be directed to a file but defaults to STDOUT
- Is for demonstration purposes
- Carries no warranty and no responsibility is held by the author or Cisco for what YOU do with it
- Might be useful as a starting point when you are learning the UCSM XML API

PERL Example

```
#!/usr/bin/perl -w
```

```
# use strict;  
use Socket;  
use LWP::UserAgent;  
use Getopt::Std;
```

```
my $ua = LWP::UserAgent->new;  
my $cookie;  
my %option = ();  
my $FH;  
my $username;  
my $password;  
my $targetUcs;  
my $outfile;  
my $request;  
my $line;
```

```
getopts("o:u:p:t:r:eh", \%option);

# usage() if ($option{h});

if($option{u}){
    $username = $option{u};
    print "Username: $username\n";
}else{
    print "No username entered\n";
    usage();
    exit(0);
}
if($option{p}){
    $password = $option{p};
    print "Password: $password\n";
}else{
    usage();
    exit(0);
}
if($option{t}){
    $targetUcs = $option{t};
    print "UCS: $targetUcs\n";
}else{
    usage();
    exit(0);
}
```

```
if($option{o}){
    $outfile = $option{o};
    open(OUT,">>$outfile") || die "Unable to open output file $outfile:$!\n";
    $FH = *OUT;
}else{
    print "Using stdout\n\n";
    $FH = *STDOUT;
}
if($option{r}){
    $request = $option{r};
}
```

```
$ua->agent("grosenb/0.1 ");
# Create an authentication request
my $authRequest = HTTP::Request->new(POST => "http://$targetUcs/nuova");
$authRequest->content_type('application/x-www-form-urlencoded');
$authRequest->content('<aaaLogin inName="'. $username.'" inPassword="'. $password.'"/>');

# Pass request to the user agent and get a response back
my $authResult = $ua->request($authRequest);

# Check the outcome of the response
if ($authResult->is_success) {
    print "Got auth result:\n", $authResult->content, "\n";
    $authResult->content =~ /.+outCookie=\"(.+)\\" outRefreshPeriod.+;/;
    $cookie = $1;
    defined($cookie) || die "Unable to obtain cookie!";
} else {
    die "Authentication failed!\n\n", $authResult->status_line, "\n";
}
print "Got cookie: $cookie\n";

if($option{e}){
    eventSubscribe($FH, $cookie, $targetUcs);
}
close $FH;
```

```
# Create a user request
if ($request){
    $request =~ s/(\S+?\s+?cookie=\")(\\S*)(\\"s+?)/$1$cookie$3/;
    print $FH "$request\n";
    my $userRequest = HTTP::Request->new(POST => "http://$targetUcs/nuova");
    $userRequest->content($request);

    my $userResult = $ua->request($userRequest);

    if ($userResult->is_success) {
        print "Got user result:\n", $userResult->content, "\n";
    }else {
        die "User request failed!\n\n", $userResult->status_line, "\n";
    }
}
```

```

```

```
    -e: subscribe to event stream
```

```
    -h: this help listing
```

```
    sends a request string to UCSM API - no syntax checking is done on the string!
```

```
        The [realcookie] can be any string without whitespace but MUST be in double quotes!
```

```
};
```

```
  exit(0);
```

```
}
```

UCS Powertool

UCS Powertool

- Windows Powershell library
- Download available from Cisco Developer Network
- Batteries not supplied
- 1463 Cmdlets
- 26 Aliases
- 17 Functions
- Manage multiple UCS instances simultaneously

- Download and getting started guide
<http://developer.cisco.com/web/unifiedcomputing/pshell-download>

Powertool Example

```
Connect-Ucs 10.0.0.27
```

```
$( "Name,Id";foreach ($vlan in 500..550) { "VLAN${vlan},${vlan}" } ) > C:\Demo\vlans.csv
```

```
$lc = (Get-UcsLanCloud)
```

```
$lc | Get-UcsVlan | select ucs,name,id
```

```
import-csv C:\Demo\vlans.csv | % { $lc | add-ucsvlan -Name $_.Name -Id $_.Id }
```

```
$lc | Get-UcsVlan | select ucs,name,id
```

```
# Delete the added VLANs
```

```
$lc | Get-UcsVlan | ? { $_.Id -ge 500 -and $_.Id -le 550 } | Remove-UcsVlan -Force
```

Q & A

Complete Your Online Session Evaluation

Give us your feedback and receive a Cisco Live 2013 Polo Shirt!

Complete your Overall Event Survey and 5 Session Evaluations.

- Directly from your mobile device on the Cisco Live Mobile App
- By visiting the Cisco Live Mobile Site www.ciscoliveaustralia.com/mobile
- Visit any Cisco Live Internet Station located throughout the venue

Polo Shirts can be collected in the World of Solutions on Friday 8 March 12:00pm-2:00pm

Cisco *live!* 365

Don't forget to activate your Cisco Live 365 account for access to all session material,

communities, and on-demand and live activities throughout the year. Log into your Cisco Live portal and click the "Enter Cisco Live 365" button.
